**A Field Guide to Genetic Programming**, 2008 Genetic programming GP is a systematic domain independent method for getting computers to solve problems automatically starting from a high level statement of what needs to be done Using ideas from natural evolution GP starts from an ooze of random computer programs and progressively refines them through processes of mutation and sexual recombination until high fitness solutions emerge All this without the user having to know or specify the form or structure of solutions in advance GP has generated a plethora of human competitive results and applications including novel scientific discoveries and patentable inventions This unique overview of this exciting technique is written by three of the most active scientists in GP See [www.gp-field-guide.org.uk](http://www.gp-field-guide.org.uk) for more information on the book

**Evolutionary Computation, Machine Learning and Data Mining in Bioinformatics** Mario Giacobini, Leonardo Vanneschi, William S. Bush, 2012-03-28 This book constitutes the refereed proceedings of the 10th European Conference on Evolutionary Computation Machine Learning and Data Mining in Bioinformatics EvoBIO 2012 held in Málaga Spain in April 2012 co located with the Evo 2012 events The 15 revised full papers presented together with 8 poster papers were carefully reviewed and selected from numerous submissions Computational Biology is a wide and varied discipline incorporating aspects of statistical analysis data structure and algorithm design machine learning and mathematical modeling toward the processing and improved understanding of biological data Experimentalists now routinely generate new information on such a massive scale that the techniques of computer science are needed to establish any meaningful result As a consequence biologists now face the challenges of algorithmic complexity and tractability and combinatorial explosion when conducting even basic analyses

**Metaheuristics for Machine Learning** Mansour Eddaly, Bassem Jarboui, Patrick Siarry, 2023-03-13 Using metaheuristics to enhance machine learning techniques has become trendy and has achieved major successes in both supervised classification and regression and unsupervised clustering and rule mining problems Furthermore automatically generating programs via metaheuristics as a form of evolutionary computation and swarm intelligence has now gained widespread popularity This book investigates different ways of integrating metaheuristics into machine learning techniques from both theoretical and practical standpoints It explores how metaheuristics can be adapted in order to enhance machine learning tools and presents an overview of the main metaheuristic programming methods Moreover real world applications are provided for illustration e.g. in clustering big data machine health monitoring underwater sonar targets and banking

**Pattern Mining with Evolutionary Algorithms** Sebastián Ventura, José María Luna, 2016-06-13 This book provides a comprehensive overview of the field of pattern mining with evolutionary algorithms To do so it covers formal definitions about patterns patterns mining type of patterns and the usefulness of patterns in the knowledge discovery process As it is described within the book the discovery process suffers from both high runtime and memory requirements especially when high dimensional datasets are analyzed To solve this issue many pruning strategies have been developed Nevertheless with the growing interest in the storage of information more and more datasets comprise such a dimensionality that the discovery of interesting patterns becomes a challenging process In this regard the use of evolutionary algorithms for mining pattern enables the computation capacity to be reduced providing sufficiently good solutions This book offers a survey on evolutionary computation with particular emphasis on genetic algorithms and genetic programming Also included is an analysis of the set of quality measures most widely used in the field of pattern mining with evolutionary algorithms This book serves as a review of the most important evolutionary algorithms for pattern mining It considers the analysis of different algorithms for mining different type of patterns and relationships between patterns such as frequent patterns infrequent patterns patterns defined in a continuous domain or even positive and negative patterns A completely new problem in the pattern mining field mining of exceptional relationships between patterns is discussed In this problem the goal is to identify patterns which distribution is exceptionally different from the distribution in the complete set of data records Finally the book deals with the subgroup discovery task a method to identify a subgroup of interesting patterns that is related to a dependent variable or target attribute This subgroup of patterns satisfies two essential conditions interpretability and interestingness
