Task Analysis is not only the most important component of Instructional Design but also the most often misconstrued and poorly executed. Starting with this premise these authors have developed a complete reference and instructional text on Task Analysis. The Handbook of Task Analysis Procedures fulfills three distinct purposes. As an overview of the field it presents a comprehensive collection of functions, techniques and tools that can be used in a variety of settings. Thirty-five different procedures are cataloged and described in individual chapters. Providing flowcharts and examples, it is organized to instruct the reader on how to perform these techniques. Finally all chapters have been consistently structured making it an ideal reference book. Handbook of Task Analysis Procedures is designed to help the reader select a specific task analysis technique for a particular situation. Having done this, the reader can then refer to the appropriate chapter for his chosen technique. This chapter provides a statement of purpose, an overview, and applications. It then presents a step by step description of how to use the procedure. The chapter concludes with examples, an evaluation, and a complete set of references. Designed to be used in education and by trainers in the business sector, this volume is a unique reference book. Part I provides an overview of Task Analysis and describes the variables that affect how task analysis is performed. A decision table and discussion help the reader select specific techniques. The techniques are grouped in Part II, III, and IV according to their functional similarity--learning analysis, job analysis, content analysis. Part V describes information gathering tools. This Handbook is essential for the reader who believes that competent task analysis is a vital part of

Analyzing Task Analysis Data A. John Eschenbrenner (Jr), Philip B DeVries (Jr), James T. Miller, Hendrick W. Ruck, MCDONNELL DOUGLAS ASTRONAUTICS CO-ST LOUIS MO., 1980 Task analysis a critical front end activity in the Instructional System Development methodology is the process of partitioning job tasks into their component subtasks and identifying the skills and knowledges required to support task performance This study was initiated in response to a Request for Personnel Research generated by the Air Training Command which noted that a wide range of nonstandardized task analysis procedures are in use throughout the training community Implementation of a standardized procedure for identifying essential subtasks and supporting skills and knowledges was expected to hold considerable potential for increasing training efficiency and reducing training costs A simplified task analysis procedure and documentation system was specified and a task analysis handbook was prepared Handbook procedures were field tested at six Air Force installations Results indicated that the handbook procedures met the design criteria of simplicity validity reliability and time efficiency cost effectiveness The feasibility and utility of implementing a computer based task analysis data bank was assessed and a preliminary data bank design was then developed Additionally two technology transfer seminars were conducted to assist Air Force personnel in applying handbook task analysis procedures Author *A Guide To Task Analysis* B Kirwan, L. A Method for Man-machine Task Analysis Robert B. Miller,1953 *Handbook for Evaluating Knowledge-Based Systems* Leonard Adelman,Sharon L. Riedel,1997-04-30 Knowledge based systems are increasingly found in a wide variety of settings and this handbook has been written to meet a specific need in their widening use While there have been many successful applications of knowledge based systems some applications have failed because they never received the corrective feedback that evaluation provides for keeping development focused on the users needs in their actual working environment This handbook provides a conceptual framework and compendium of methods for performing evaluations of knowledge based systems during their development Its focus is on the users and subject matter experts evaluation of the usefulness of the system and not on the developers testing of the adequacy of the programming code The handbook permits evaluators to systematically answer the following kinds of questions Does the knowledge based

system meet the users task requirements Is the system easy to use Is the knowledge base logically consistent Does it meet the required level of expertise Does the system improve performance The authors have produced a handbook that will serve two audiences a tool that can be used to create knowledge based systems practitioners developers and evaluators and a framework that will stimulate more research in the area academic researchers and students To accomplish this the handbook is built around a conceptual framework that integrates the different types of evaluations into the system of development process The kinds of questions that can be answered and the methods available for answering them will change throughout the system development life cycle And throughout this process one needs to know what can be done and what can t It is this dichotomy that addresses needs in both the practitioner and academic research audiences
