Genetic Bomb:

The Global Genome Eugene Thacker, 2006-09-08 How global biotechnology is redefining life itself In the age of global biotechnology DNA can exist as biological material in a test tube as a sequence in a computer database and as economically valuable information in a patent In *The Global Genome* Eugene Thacker asks us to consider the relationship of these three entities and argues that by their existence and their interrelationships they are fundamentally redefining the notion of biological life itself Biological science and the biotech industry are increasingly organized at a global level in large part because of the use of the Internet in exchanging biological data International genome sequencing efforts genomic databases the development of World Intellectual Property policies and the borderless business of biotech are all evidence of the global intersections of biology and informatics of genetic codes and computer codes Thacker points out the internal tension in the very concept of biotechnology the products are more tech than bio but the technology itself is fully biological composed of the biomaterial labor of genes proteins cells and tissues Is biotechnology a technology at all he asks or is it a notion of life itself that is inseparable from its use in the biotech industry The three sections of the book cover the three primary activities of biotechnology today the encoding of biological materials into digital form as in bioinformatics and genomics its recoding in various ways including the biocolonialism of mapping genetically isolated ethnic populations and the newly pervasive concern over biological security and its decoding back into biological materiality as in tissue engineering and regenerative medicine Thacker moves easily from science to philosophy to political economics enlivening his account with ideas from such thinkers as Georges Bataille Georges Canguilhem Michel Foucault Antonio Negri and Paul Virilio The global genome says Thacker makes it impossible to consider biotechnology without the context of globalism

The Gene Factor M. J. Manley, 2013-10 The *Gene Factor* by M J Manley portrays a youthful mission of the challenges to prove beyond a reasonable doubt that God manifests communications through the DNA of our very souls The novel is a breakthrough scientifically on how communications with a highly spiritual being God is manifest deep deep down into the very soul of transmission genetic factors the DNA cell Scientific discoveries show how communications through gene factors are transmitted The scripted discoveries in *The Gene Factor* tell how blessings prayers and having faith are communicated Manley states that *The Gene Factor* is the most revolutionary novel ever written about how God communicates man I have written I have researched and I have documented all the information that is within not without that our heavenly father fulfills all the blessings the prayers and the hopes of all mankind and all religions from DNA Deeply embedded in our DNA is where communications with God are sent and where our heavenly father communicates back to us through the living cells and to answer our prayers *The Gene Factor* is written so the layman can understand but this concept is deeper than simply the story of genetic DNA To fully understand I must present my theory and do presentations and promote my premises by giving lectures and appearances
