## Important OSHA Standards Contributing to Fewer Workplace Accidents

Standard 1910.132  
**Personal Protective Equipment:** Protective equipment, including clothing, helmets, goggles and other eye protection, must be used when process or environment presents hazards. Electrical safety equipment or mechanical failures can cause deadly harm.

Standard 1910.147  
**Lock Out-Tag Out:** Before any servicing or maintenance on a machine or equipment is performed, the energy must be isolated and stored hazardous energy must be released. This standard requires employers to develop and use with their workers a "lock out/tag out" program and 50,000 workers each year are cited by OSHA.

Standard 1910.119  
**Process Safety Management (PSM):** Put in place in 1992 to prevent a major unplanned release of a highly hazardous chemical, PSM was developed to prevent a major release of a highly hazardous chemical that could result in death or serious injury.

**OSHA Inspections:** OSHA inspectors conduct workplace safety inspections to ensure that employers are complying with OSHA standards. Inspections are conducted by OSHA inspectors and are required for all employers with 10 or more employees. OSHA inspectors are trained and certified to conduct inspections and are authorized to issue citations and penalties.
