Enumerative Algebraic Geometry Steven L. Kleiman, Anders Thorup, 1991-01-01 1989 marked the 150th anniversary of the birth of the great Danish mathematician Hieronymus George Zeuthen Zeuthen s name is known to every algebraic geometer because of his discovery of a basic invariant of surfaces However he also did fundamental research in intersection theory enumerative geometry and the projective geometry of curves and surfaces Zeuthen s extraordinary devotion to his subject his characteristic depth thoroughness and clarity of thought and his precise and succinct writing style are truly inspiring During the past ten years or so algebraic geometers have reexamined Zeuthen s work drawing from it inspiration and new directions for development in the field The 1989 Zeuthen Symposium held in the summer of 1989 at the Mathematical Institute of the University of Copenhagen provided a historic opportunity for mathematicians to gather and examine those areas in contemporary mathematical research which have evolved from Zeuthen s fruitful ideas This volume containing papers presented during the symposium as well as others inspired by it illuminates some currently active areas of research in enumerative algebraic geometry

Enumerative Geometry and Classical Algebraic Geometry, 1982 *Enumerative Geometry and Classical Algebraic Geometry* 3Island Press, 1982-01-01 Enumerative Geometry and Classical Algebraic

Geometry Patrick Le Barz, 1982 *An Invitation to Modern Enumerative Geometry* Andrea T. Ricolfi, 2022-11-17 This book is based on a series of lectures given by the author at SISSA Trieste within the PhD courses Techniques in enumerative geometry 2019 and Localisation in enumerative geometry 2021 The goal of this book is to provide a gentle introduction aimed mainly at graduate students to the fast growing subject of enumerative geometry and more specifically counting invariants in algebraic geometry In addition to the more advanced techniques explained and applied in full detail to concrete calculations the book contains the proofs of several background results important for the foundations of the theory In this respect this text is conceived for PhD students or research beginners in the field of enumerative geometry or related areas This book can be read as an introduction to Hilbert schemes and Quot schemes on 3 folds but also as an introduction to localisation formulae in enumerative geometry It is meant to be accessible without a strong background in algebraic geometry however three appendices one on deformation theory one on intersection theory one on virtual fundamental classes are meant to help the reader dive deeper into the main material of the book and to make the text itself as self contained as possible 3264 and All That David Eisenbud, Joe Harris, 2016-04-14 3264 the mathematical solution to a question concerning geometric figures **First European Congress of Mathematics Paris, July 6-10, 1992** Anthony Joseph, Fulbert Mignot, Francois Murat, Bernard Prum, Rudolf Rentschler, 2012-12-06 Table of Contents D Duffie Martingales Arbitrage and Portfolio Choice J Frlich Mathematical Aspects of the Quantum Hall Effect M Giaquinta Analytic and Geometric Aspects of Variational Problems for Vector Valued Mappings U Hamenst dt Harmonic Measures for Leafwise Elliptic Operators Along Foliations M Kontsevich Feynman Diagrams and Low Dimensional Topology S B Kuksin KAM Theory for Partial Differential Equations M Laczkovich Paradoxical Decompositions A Survey of Recent Results J F Le Gall A Path Valued Markov Process and its Connections with Partial Differential Equations I Madsen The Cyclotomic Trace in Algebraic K Theory A S Merkurjev Algebraic K Theory and Galois Cohomology J Nekov r Values of L Functions and p Adic Cohomology Y A Neretin Mantles Trains and Representations of Infinite Dimensional Groups M A Nowak The Evolutionary Dynamics of HIV Infections R Piene On the Enumeration of Algebraic Curves from Circles to Instantons A Quarteroni Mathematical Aspects of Domain Decomposition Methods A Schrijver Paths in Graphs and Curves on Surfaces B Silverman Function Estimation and Functional Data Analysis V Strassen Algebra and Complexity P Tukia Generalizations of Fuchsian and Kleinian Groups C Viterbo Properties of Embedded Lagrange Manifolds D Voiculescu Alternative Entropies in Operator Algebras M Wodzicki Algebraic K Theory and Functional Analysis D Zagier Values of Zeta Functions and Their Applications **Algebraic Geometry. on construction of the minimal model in tame theory and computation of the Lusternik Schnirelmann category by means articles on Moore conjectures on tame homotopy and on the properties of Poincaré series of loop spaces

Singularity Theory and its Applications David Mond, James Montaldi, 2006-11-14 A workshop on Singularities Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are original research stimulated by the symposium and workshops All have been refereed and none will appear elsewhere The main topic deformation theory is represented by several papers on descriptions of the bases of versal deformations and several more on descriptions of the generic fibres Other topics include stratifications and applications to differential geometry

Singular Algebraic Curves Gert-Martin Greuel, Christoph Lossen, Eugenii Shustin, 2018-12-30 Singular algebraic curves have been in the focus of study in algebraic geometry from the very beginning and till now remain a subject of an active research related to many modern developments in algebraic geometry symplectic geometry and tropical geometry The monograph suggests a unified approach to the geometry of singular algebraic curves on algebraic surfaces and their families which applies to arbitrary singularities allows one to treat all main questions concerning the geometry of equisingular families of curves and finally leads to results which can be viewed as the best possible in a reasonable sense Various methods of the cohomology vanishing theory as well as the patchworking construction with its modifications will be of a special interest for experts in algebraic geometry and singularity theory The introductory chapters on zero dimensional schemes and global deformation theory can well serve as a material for special courses and seminars for graduate and post graduate students Geometry in general plays a leading role in modern mathematics and algebraic geometry is the most advanced area of research in geometry In turn algebraic curves for more than one century have been the central subject of algebraic geometry both in fundamental theoretic questions and in applications to other fields of mathematics and mathematical physics Particularly the local and global study of singular algebraic curves involves a variety of methods and deep ideas from geometry analysis algebra combinatorics and suggests a number of hard classical and newly appeared problems which inspire further development in this research area

Hilbert Schemes of Zero-Dimensional Subschemes of Smooth Varieties Lothar Göttsche, 2006-11-15 In this book we study Hilbert schemes of zero dimensional subschemes of smooth varieties and several related parameter varieties of interest in enumerative geometry The main aim here is to describe their cohomology and Chow rings Some enumerative applications are also given The Weil conjectures are used to compute the Betti numbers of many of the varieties considered thus also illustrating how this powerful tool can be applied The book is essentially self contained assuming only a basic knowledge of algebraic geometry it is intended both for graduate students and research mathematicians interested in Hilbert schemes enumerative geometry and moduli spaces

Enumerative Algebraic Geometry Via Techniques of Symplectic Topology

and Analysis of Local Obstructions Aleksey Zinger, 2002 Enumerative geometry of algebraic varieties is a fascinating field of mathematics that dates back to the nineteenth century We introduce new computational tools into this field that are motivated by recent progress in symplectic topology and its influence on enumerative geometry The most straightforward applications of the methods developed are to enumeration of rational curves with a cusp of specified nature in projective spaces A general approach for counting positive genus curves with a fixed complex structure is also presented The applications described include enumeration of rational curves with a 3 4 cusp genus two and genus three curves with a fixed complex structure in the two dimensional complex projective space and genus two curves with a fixed complex structure in the three dimensional complex projective space Our constructions may be applicable to problems in symplectic topology as well

The Julius Petersen Graph Theory Centennial L.D. Andersen, J. Bang-Jensen, T.R. Jensen, L.K. Jørgensen, G. Sabidussi, C. Thomassen, B. Toft, P.D. Vestergaard, 2016-06-06 Julius Petersen's paper Die Theorie der regulären Graphen in Acta Mathematica volume 15 1891 stands at the beginning of graph theory as we know it today The Danish group of graph theorists decided in 1985 to mark the 150th birthday of Petersen in 1989 as well as the centennial of his paper It was felt that the occasion called for a presentation of Petersen's famous paper in its historical context and in a wider sense of Petersen's life and work as a whole However the readily available information about Julius Petersen amounted to very little not even a full bibliography existed and virtually nothing was known about the circumstances that led him to write his famous paper The study of Petersen's life and work has resulted in several papers in particular a biography a bibliography an annotated edition of the letters surrounding Petersen's paper of 1891 an analysis of Petersen's paper and an annotated edition of parts of Petersen's correspondence with Sylow on Galois theory The first four of these papers together with a survey of matching theory form the first part of this book In addition to these five special papers there are papers submitted in the celebration of the Petersen centennial

Space Curves Franco Ghione, Christian Peskine, Edoardo Sernesi, 1987-07-15 The main topics of the conference on Curves in Projective Space were good and bad families of projective curves postulation of projective space curves and classical problems in enumerative geometry

Complex Analysis and Algebraic Geometry Michael Schneider, 2000 The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences Each volume is associated with a particular conference symposium or workshop These events cover various topics within pure and applied mathematics and provide up to date coverage of new developments methods and applications

Singularity Theory and Its Applications, 1991

Configuration Spaces Over Hilbert Schemes and Applications Danielle Dias, Patrick Le Barz, 1996-12-16 The main themes of this book are to establish the triple formula without any hypotheses on the genericity of the morphism and to develop a theory of complete quadruple points which is a first step towards proving the quadruple point formula under less restrictive hypotheses This book should be of interest to graduate students and researchers in the field of algebraic geometry The reader is expected to have some

basic knowledge of enumerative algebraic geometry and pointwise Hilbert schemes
