**Guidelines for the Routine Collection of Capture Fishery Data** Food and Agriculture Organization of the United Nations, 1999 These guidelines aim to help those who design routine data collection programmes focusing on the relationship between typical questions asked by policy makers and managers and the data required for providing reliable answers Fisheries policy and management objectives particularly under the precautionary approach need to be based upon analyses of reliable data Data are needed to make rational decisions evaluate the fisheries performance in relation to management activities and fulfil regional requirements These objectives are achieved using fishery performance indicators Indicators are used to measure the state of the resource the performance of fishing controls economic efficiency socio economic performance and social continuity The primary factor in choosing what data to collect is the link between the necessary operational biological
