Hyde,2006 For those who devour Comprehending Math as I did their teaching will be clearer bolder more connected And for the ultimate beneficiaries they

will have a chance to understand just how integrally our world is connected. Ellin Oliver Keene, author of *Mosaic of Thought*, notes that no matter the content area, students need to develop clear ways of thinking about and understanding what they learn. But this kind of conceptual thinking seems more difficult in math than in language arts and social studies. Fortunately, we now know how to help kids understand more about mathematics than ever before, and in *Comprehending Math*, you will find out that much of math's conceptual difficulty can be alleviated by adapting what we have learned from research on language and cognition. In *Comprehending Math*, Arthur Hyde, coauthor of the popular *Best Practice*, shows you how to adapt some of your favorite and most effective reading comprehension strategies to help your students with important mathematical concepts. Emphasizing problem solving, Hyde and his colleagues demonstrate how to build into your practice math-based variations of K-W-L, visualizing, asking questions, inferring, predicting, making connections, determining importance, synthesizing. He then presents a practical way to braid together reading comprehension, math problem solving, and thinking to improve math teaching and learning. Elaborating on this braided model of approach to problem solving, he shows how it can support planning as well as instruction. *Comprehending Math* is based on current cognitive research and features more than three dozen examples that range from traditional story problems to open-ended or extended response problems and mathematical tasks. It gives you step-by-step ideas for instruction and smart, specific advice on planning, strategy-based teaching. Help students do math and get it at the same time. Read *Comprehending Math*, use its adaptations of familiar language arts strategies, and discover how deeply students can understand math concepts and how well they can use that knowledge to solve problems.

Elementary School Teachers' Mathematics Instructional Decision Making in the Context of District Mandates on Instruction Heather Anne Martin, 2008. In the current educational climate, teachers in low-performing schools are experiencing pressure from state and district policy makers to raise student performance on state tests. Some district administrations have undertaken various measures, including implementing numerous and specific mathematics content standards, adopting particular curricular packages, and requiring teachers to use them as their primary instructional materials, and even creating pacing guides with uniform timelines for presenting lessons to students. These efforts have had the cumulative effect of urging teachers to stick closely to a standard curriculum in order to raise student test scores. Teachers must also interpret and attend to the needs of their students and ideally teach their students to understand mathematical concepts and processes, as opposed to narrowly mastering procedural skills. It may not always be possible to both follow administrative mandates about instruction and meet student needs, and teachers may have to make a compromise between these two objectives. In this study, I examined how elementary school teachers in a particular accountability pressured school decided to teach mathematics. Drawing on multiple interviews and ten classroom observations per teacher, I created portraits of the mathematics instructional choices of four second-grade teachers, including their use of instructional materials such as textbooks. I drew on an analytical framework adapted from Stein, Grover, and

Henningsen 1996 to assess various features of the lesson in order to note the interaction between the materials and the teachers decisions about how to use them I developed a lesson signature for each teacher a visual representation of the typical organization of the teacher s lessons and how materials were used within them My findings indicated that the teachers individual goals for their teaching beliefs about their students needs and interpretations of the district s curricular mandates interacted to steer their instructional choices to very different results Two of the teachers dutifully followed the textbook while two essentially disregarded it in favor of other materials Teachers own senses of their autonomy to make curricular decisions and their support for their students autonomy in learning math emerged as important factors I suggest implications for teacher professional development and curricular materials development
