

ELEMENTARY COMPUTER PROGRAMMING - PART I

Programming; also known as coding, is the process of writing a program to solve a given problem, testing it to ensure it is accurate or correct and preparing documents to support it.

DEFINITION OF TERMINOLOGIES

- **A program;** also known as a code, is a set of instructions that perform a specific processing task
- **A computer programmer;** is a person who uses a programming language like C, C++, Java, VB to write programs that solve computer related problems
- **A programming language;** is a set of words and rules governing the use of computers employed in constructing programs. It is the only language that a computer understands.
- **Algorithm;** this is a sequence of precise instructions for solving a problem in a finite amount of time.
- **Syntax;** refers to the rules that govern the use of a particular programming language
- **Semantics;** refers to the meaning of a valid statement in a given programming language.
- **A module;** is an algorithm or program developed to solve sub problems
- **Constants;** are declarations in a program that store values that do not change during program execution
- **Documentation;** is the process of writing an explanation of how the program works and how to use it.
- **Comments;** are simply texts that are ignored by the compiler but inform the reader of what the programmer is doing at any particular point in the program.

Characteristics of Programming Languages

1. They have rules governing the structure of the language referred to as syntax
2. They have vocabulary, i.e. list of words accepted within a language
3. Each key word in a language has only one meaning attached to it (semantic)

TYPES OF PROGRAMMING LANGUAGES

1. Low level languages, which include; machine code and assembly language
2. High level languages, which include; BASIC, COBOL, FORTRAN, ALGOL, PASCAL, PROLOG, C
3. Very high-level languages, which include; C#, C++, Java, VB, HTML, SQL

Factors to Consider When Choosing a Programming Language

1. Availability of an appropriate compiler that can translate it
2. Type of computer to handle the task. Is it compatible with the computer system
3. Type of language. High level languages are preferred
4. Speed of execution of the language
5. Nature of work to be done. PASCAL, COBOL are suitable for commercial use; C, Java are for general use
6. Portability of the language. Ensure that the language is not machine dependent

Advantages of Programming Languages

1. They are unambiguous. Statements can be interpreted by humans
2. Statement are not cumbersome
3. They can be processed by the computer

Disadvantages of Programming Languages

1. Programming languages have led to the development of malicious software like viruses.
2. The basic logical flow is difficult to follow because computer programming languages are essentially serial in nature, i.e. executing one step is normally followed by execution of the next step in the program
3. Communication of the program algorithm logic is restricted to those persons who understand the particular programming language which is used

DATA TYPES

Most computer high-level programming languages like C, C++ and Java provide the following types of data.

- **Integers;** are either positive or negative whole numbers, e.g. +12, -34, -1, 3, 8
- **Real/float;** are numbers that correspond to values with decimal points, e.g. -3.4, 6.8, 0.7, 3.8, -9.0
- **Characters;** are any symbols available on the keyboard. A, a, __, x, Z, 0, __, 9, +, -, /, ?, %, >, <, :, [,]
- **Boolean/logical;** this type is used to process the logical data, which may evaluate to TRUE or FALSE. Boolean values are obtained using comparison operators like; =, <, >, <>

J. Seidel, H. G. Hunter, I. C. Rotberg, W. A. Carpenter, HUMAN RESOURCES RESEARCH ORGANIZATION ALEXANDRIA VA., 1967 The aim of the course is to provide understanding of fundamental computer programming concepts and more important to develop a proficiency in writing elementary computer programs The material was originally drawn from the U S Army s course for the Automatic Data Processing Specialist ADPS Programing Specialist MOS 745 1 The criterion problems contained in the course were chosen from actual job situations but scaled down to fit the instructional repertoire of the course The course is self contained and consists of an instruction booklet and an answer booklet It is directed toward the level of high school seniors and first year college students In its various experimental forms it was administered to a total of nearly 900 high school juniors and seniors and after final revision to a small sample of college freshmen and high school seniors Findings from the several experimental administrations of the course clearly pointed to the desirability of teaching the course with a variety of

kinds of computer problems Results indicated that students learned from making errors and thus required hints or correct answers in solving the practice problems only a small part of the time Author Elementary Computer Programming Jack Rudman,National Learning Corporation,1984 **Elementary Computer Programming with Illustrative Problems** Lisa Rosenblatt,Judah Isser Rosenblatt,1970 **Syllabus for Computer Science Technology 2T** Georg T. game as well as collected analytics data during game play Our study showed the game to be effective at introducing computer language constructs and the essentials of algorithmic thinking to elementary students Many students demonstrated a clear understanding of the core programming concepts as well as an enthusiastic interest in further learning about computer programming
