The Elements of Economics Charles Jesse Bullock,1913 This book has been written in response to a demand for a somewhat shorter and more elementary work than the Introduction to the Study of Economics which the author brought out in 1897 In order to meet this demand it was necessary to make a substantially new book in which the substance of doctrine and the general groundwork remain the same but the method of treating most subjects has been more or less radically altered Less space has been devoted to purely theoretical questions and more descriptive and illustrative material has been presented It is hoped that the present treatise will meet the needs of a relatively short course for beginners in economics As the work stands it is probably extensive enough for the longest courses now given in secondary schools If it is found too long for some of the shorter courses the instructor can easily adapt it to the needs of his class by making a few omissions The first chapter can be treated in an introductory talk or lecture on the first day that the class meets and the tenth and fifteenth chapters treating as they do topics that are seldom discussed at length in an elementary work can be readily omitted
