

Alternative Computing Architectures As a Solution to the Application of Moore's Law Energy Consumption

Energy consumption is a major concern for data centers and cloud providers. As the number of servers and the amount of data processed increase, the energy consumption of data centers is growing rapidly.

Moore's Law states that the number of transistors on a microchip doubles approximately every two years, which has led to exponential growth in computing power. However, this growth has also led to a corresponding increase in energy consumption, which is a major concern for data centers and cloud providers.

- 7. **Energy-Efficient Networking:** Designing networking hardware and protocols that consume less power.
- 8. **Energy-Efficient Storage:** Designing storage hardware and protocols that consume less power.
- 9. **Energy-Efficient Data Centers:** Designing data centers that are more energy-efficient, such as those with high power density and low PUE (Power Usage Effectiveness).
