Generalized Hypergeometric Functions:

Generalized Hypergeometric Functions Lucy Joan Slater, 1966-01-02 The theory of generalized hypergeometric functions is fundamental in the field of mathematical physics since all the commonly used functions of analysis Bessel Functions Legendre Functions etc are special cases of the general functions The unified theory provides a means for the analysis of the simpler functions and can be used to solve the more complicated equations in physics The generalized Gauss function is also used in mathematical statistics and the basic analogues of the Gauss functions have applications in the field of number theory Dr Slater's treatment leads on from a discussion of the Gauss functions to the basic hypergeometric functions the hypergeometric integrals bilateral series and Appel series This book was planned jointly with the late Professor W N Bailey as an extended revision of his Cambridge Mathematical Tract 1935 on the subject and Dr Slater has continued it single handed since Professor Bailey's death incorporating in it the results of many of her own researches Generalized

Rao, Vasudevan Lakshminarayanan, 2018 In 1813 Gauss first outlined his studies of the hypergeometric series which has been of great significance in the mathematical modelling of physical phenomena This detailed monograph outlines the fundamental relationships between the hypergeometric function and special functions In nine comprehensive chapters Dr Rao and Dr Lakshminarayanan present a unified approach to the study of special functions of mathematics using Group theory The book offers fresh insight into various aspects of special functions and their relationship utilizing transformations and group theory and their applications It will lay the foundation for deeper understanding by both experienced researchers and novice students **Inequalities for Generalized Hypergeometric Functions** Yudell L. physical or engineering problem in a mathematical format In this detailed monograph the second order Ordinary Differential Equation of Carl Friedrich Gauss is the starting point for the study of special functions This is a simple unified and novel approach to the treatment of the subject The new feature in this presentation is that of the group theory associated with special functions Generalized Hypergeometric Functions Transformations and group theoretical aspects outlines the important relationship between the Gauss hypergeometric equation and corresponding special functions Each chapter details the application of group theory to the study of special functions and discusses various transformations group theory and their relevance In various applications It is a relatively self contained book that includes extensive introductory expositions of group theory Offering an original approach to the hypergeometric equation and related function this book is important for fundamental understanding of the mathematics underlying various aspects of physics applied mathematics and engineering With the use of worked examples proofs summaries and references this work can be used in various courses of study and research and it is also useful for self study Book jacket *Generalized Hypergeometric Functions* Leland B. Path Functions and Generalized Basic Hypergeometric Functions Kevin W. J. Kadell,1987 Path functions and their basic properties are obtained by extending the constructive theory of partition generating functions developed by Sylvester Durfee Andrews and others Path functions also arise when we have an expansion of a function satisfying a linear difference equation Our expansions provide an interesting trade off between complexity and rate of convergence [Inequalities for Generalized Hypergeometric Functions](#) Yudell L. Luke,1970 It is shown that some well known Pade approximations for a particular form of the Gaussian hypergeometric function and two of its confluent forms give upper and lower bounds for these functions under suitable restrictions on the parameters and variable With the aid of the beta and Laplace transforms two sided inequalities are derived for the ${}_pF_q$ generalized hypergeometric function ${}_pF_q$ or ${}_pF_q(1)$ and for a particular form of Meijer s G function Several examples are developed These include upper and lower bounds for certain elementary functions complete elliptic integrals the incomplete gamma function modified Bessel functions and parabolic cylinder functions Author
