Undergraduate Mathematics for the Life Sciences Glenn Ledder,Jenna P. Carpenter,Timothy D. Comar,2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to

generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see Entry Level Mathematics Gill Hewlett,2003 Contains an accessible page design with controlled language and readability levels to match the requirements of the students undertaking this qualification The Teacher File contains activities that build upon areas of work given in the Student Book This Student Book and accompanying Teacher File provide resources for revised specifications Bahamian Students' Experiences with Mathematics in American Universities and Colleges Nikki Rochelle Cleare,2011 This longitudinal qualitative multi case study examines the mathematical experiences of three Bahamian students pursuing science degrees in American universities and its relationship to their previous mathematical experiences in their Bahamian high schools Drawing on cultural psychology and sociocultural theories of learning this study found that the relationship between the academic preparedness of the participants on their experiences with collegiate mathematics is not limited to subject content only The lessons learnt from the implied curriculum also play a role in their experiences with collegiate mathematics Of the three participants two have had to learn develop techniques for studying because they had not been sufficiently challenged in their previous environments to do so Each of the cases also highlights some powerful constructs needed for success in mathematics and at least two emphasize making connections between concepts procedures manipulatives tools and multiple approaches when solving problems This study contributes to an emerging area of research on student persistence in college level mathematics courses as well as to the ongoing discussions in mathematics education regarding the role importance of conceptual understanding and how to promote it The study makes visible some of the ways in which students post secondary experiences with mathematics are shaped by their perception of their mathematical preparation thus providing a basis for discussions of possible curricular change in the Bahamas It also suggests that issues such as confidence and school teacher expectations of students may play a role in the development of conceptual understanding **Evaluation of the Entry Level Mathematics Program, Year One** Sheila Cowen,Robert L. Trincherro,California State University, Hayward. Office of Testing & Evaluation,1986 Mathematicians and Education Reform, 1989-1990 Naomi Fisher,Harvey Keynes,Philip Wagreich,1991 Educational issues are receiving a great deal of attention in the mathematical sciences community as concern rises over the quality of instruction in the nation s schools colleges and universities Insuring a mathematically literate population and increasing the number of students pursuing careers in mathematics science and engineering are high on the list of priorities Mathematicians can make important contributions to the educational reform process The present volume is the second in the series Issues in Mathematics Education launched in 1990 by the Conference Board of the Mathematical

Sciences and published by the AMS and the Mathematical Association of America The purpose of the series is to stimulate the flow of information among mathematical scientists education specialists and teachers about innovative efforts to revitalize mathematics education Compiled and edited by the directors of the Mathematicians and Education Reform MER Network this book contains papers by speakers and participants in MER workshops and special sessions over the last three years Like the first volume which also grew out of an MER workshop this book is organized into two sections Projects and Issues and Reactions providing a balance between descriptions of successful existing projects and more in depth discussion of problems and issues in mathematics education reform With contributions by some of the major leaders in this area today this book will likely be of interest to a broad segment of the mathematical sciences community **Entry Level**
