

WOLVERINE

• **Clawed hands:** Thanks to his bone to grow a hand size, a fist would be able to crush anything that could be crushed.

• **Adaptation:** The additional muscle fibers develop within Wolverine's forearms, letting him retract his claws in a fraction of a second.

• **Adaptation:**

• **Bones:**

• **Hand of Adam:**

◆ BONE CLAWS

Wolverine's abilities involve an additional layer, that of an extra bone, that act as retractable claws. Each is approximately a foot in length and grows to a sharp point. When voluntarily retracted, the claws reside inside the hand, but when fully extended, they protrude from the tips of the fingers. These muscles also allow the claws to extend. When the claws have retracted to their internal location, Wolverine's healing factor kicks in, filling the cut wounds quickly with granulation tissue (a mixture of collagen and fibrous strands) to heal and seal the wound. Followed by a healthy granulation layer of skin. These bone claws can cut through most materials, but even being exposed along with the rest of Wolverine's anatomy, they have rarely been seen in their natural state.

◆ HOT CLAWS

During an attempt to save Wolverine from certain doom, Wolverine was contacted within a matter of weeks. Though they reported that he remained unscathed, it was clear that about time to expect the best during his return to the cage. Because Wolverine's healing factor plays an effective role in his recovery, it seems he may be able to control his healing energy to some extent. This healing energy transfer might only be limited to his body. For example, if the healing energy transferred to Wolverine's white blood cells, which would activate the release of the antibodies in his blood, such antibodies could trigger a dramatic increase in temperature. This healing heat would Wolverine's already impressive reputation of which was now solid.
