Artificial Intelligence in Design '96 John S. Gero, Fay Sudweeks, 2012-12-06 Change is one of the most significant parameters in our society Designers are amongst the primary change agents for any society As a consequence design is an important research topic in engineering and architecture and related disciplines since design is not only a means of change but is also one of the keystones to economic competitiveness and the fundamental precursor to manufacturing The development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research both computational and cognitive These forms of design research have only been carried out in the last decade or so and in the temporal sense they are still immature Notwithstanding this immaturity noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding Whilst many researchers in the field of artificial intelligence in design utilise ideas about how humans design as one source of concepts there is normally no attempt to model human designers Rather the results of the research presented in this volume demonstrate approaches to increasing our understanding of design as a process **Ai '92 - Proceedings Of The 5th Australian Joint Conference On Artificial Intelligence** A Adams, L Sterling, 1992-10-09 The papers in this volume deal with academic research topics as well as practical applications in AI Special emphasis is given to computer vision machine learning neural networks mixed with theory of logic and reasoning and practical applications of expert systems in industry and decision support **Computers and Law**, 1990 **Proceedings of the Fourth Biennial Conference of the Canadian Society for Computational Studies of Intelligence** Canadian Society for Computational Studies of Intelligence. Conference, Canadian Information Processing Society, University of Saskatchewan, Simon Fraser University, 1982

**Law, Computer Science, and Artificial Intelligence** Ajit Narayanan, Mervyn Bennun, 1991 The interaction between the disciplines of law computer science and artificial intelligence are attracting increasing attention within the academic and commercial communities *The Interaction of Observation and Inference* R. Filman, 1979 An intelligent computer program must have both a representation of its knowledge and a mechanism for manipulating that knowledge in a reasoning process This thesis examines the problem of formalizing the expression and solution of reasoning problems in a machine manipulable form It is particularly concerned with analyzing the interaction of the standard form of deductive steps with an observational analogy obtained by performing computation in a semantic model This dissertation is centered on the world of retrograde analysis chess a particularly rich domain for both observational tasks and long deductive sequences A formalization is embodied in its axioms and a major portion is devoted to both axiomatizing the rules of chess and discussing and comparing

the representational decisions involved in that axiomatization Consideration was given not only to the necessity for these particular choices and possible alternatives but also the implications of these results for designers of representational systems for other domains Using a reasoning system for first order logic FOL a detailed proof of the solution of a difficult retrograde chess puzzle was constructed The close correspondence between this formal solution to the problem and an informal descriptive analysis a human might present was shown The proof and axioms were then examined for their relevance to general epistemological formalisms
