set of solutions to important algorithmic problems for students and researchers interested in quickly locating useful information This first edition of the reference focuses on high impact solutions from the most recent decade while later editions will widen the scope of the work All entries have been written by experts while links to Internet sites that outline their research work are provided The entries have all been peer reviewed This defining reference is published both in print and on line Applications of Secure Multiparty Computation Peeter Laud, Liina Kamm,2015-07-15 We generate and gather a lot of data about ourselves and others some of it highly confidential The collection storage and use of this data is strictly regulated by laws but restricting the use of data often limits the benefits which could be obtained from its analysis Secure multi party computation SMC a cryptographic technology makes it possible to execute specific programs on confidential data while ensuring that no other sensitive information from the data is leaked SMC has been the subject of academic study for more than 30 years but first attempts to use it for actual computations in the early 2000s although theoretically efficient were initially not practicable However improvements in the situation have made possible the secure solving of even relatively large computational tasks This book describes how many different computational tasks can be solved securely yet efficiently

It describes how protocols can be combined to larger applications and how the security efficiency trade offs of different components of an SMC application should be chosen Many of the results described in this book were achieved as part of the project Usable and Efficient Secure Multi party Computation UaESMC which was funded by the European Commission The book will be of interest to all those whose work involves the secure analysis of confidential data [Privacy in Dynamical Systems](#) Farhad Farokhi,2019-11-21 This book addresses privacy in dynamical systems with applications to smart metering traffic estimation and building management In the first part the book explores statistical methods for privacy preservation from the areas of differential privacy and information theoretic privacy e g using privacy metrics motivated by mutual information relative entropy and Fisher information with provable guarantees In the second part it investigates the use of homomorphic encryption for the implementation of control laws over encrypted numbers to support the development of fully secure remote estimation and control Chiefly intended for graduate students and researchers the book provides an essential overview of the latest developments in privacy aware design for dynamical systems [User's Guide to Cryptography and Standards](#) Alexander W.
