Sheet Metal Forming Optimization Ganesh M. Kakandikar, Vilas M. Nandedkar, 2017-10-16
Automotive and aerospace components utensils and many other products are manufactured by a forming drawing process on press machines of very thin sheet metal 0.8 to 1.2 mm It is imperative to study the effect of all involved parameters on output of this type of manufacturing process This book offers the readers with application and suitability of various evolutionary swarm and bio inspired optimization algorithms for sheet metal forming processes Book initiates by presenting basics of metal forming formability followed by discussion of process parameters in detail prominent modes of failure basics of optimization and various bioinspired approaches followed by optimization studies on various industrial components applying bioinspired optimization algorithms Key Features Focus on description of basic investigation of metal forming as well as evolutionary optimization Presentation of innovative optimization methodologies to close the gap between those formulations and industrial problems aimed at industrial professionals Includes mathematical modeling of drawing forming process Discusses key performance parameters such as Thinning Fracture and Wrinkling Includes both numerical and experimental analysis

Modelling and Simulation of Sheet Metal Forming Processes Marta C. Oliveira, José Valdemar Fernandes, 2020-04-22
The numerical simulation of sheet metal forming processes has become an indispensable tool for the design of components and their forming processes This role was attained due to the huge impact in reducing time to market and the cost of developing new components in industries ranging from automotive to packing as well as enabling an improved understanding of the deformation mechanisms and their interaction with process parameters Despite being a consolidated tool its potential for application continues to be discovered with the continuous need to simulate more complex processes including the integration of the various processes involved in the production of a sheet metal component and the analysis of in service behavior The quest for more robust and sustainable processes has also changed its deterministic character into stochastic to be able to consider the scatter in mechanical properties induced by previous manufacturing processes Faced with these challenges this Special Issue presents scientific advances in the development of numerical tools that improve the prediction results for conventional forming process enable the development of new forming processes or contribute to the integration of several manufacturing processes highlighting the growing multidisciplinary characteristic of this field

Multiscale Modelling in Sheet Metal Forming Dorel Banabic, 2016-10-20
This book gives a unified presentation of the research performed in the field of multiscale modelling in sheet metal forming over the course of more than thirty years by the members of six teams from internationally acclaimed universities The first chapter is devoted to the presentation of some recent phenomenological yield criteria BBC 2005 and BBC 2008 developed at the CERTETA center

from the Technical University of Cluj Napoca An overview on the crystallographic texture and plastic anisotropy is presented in Chapter 2 Chapter 3 is dedicated to multiscale modelling of plastic anisotropy The authors describe a new hierarchical multi scale framework that allows taking into account the evolution of plastic anisotropy during sheet forming processes Chapter 4 is focused on modelling the evolution of voids in porous metals with applications to forming limit curves and ductile fracture The chapter details the steps needed for the development of dissipation functions and Gurson type models for non quadratic anisotropic plasticity criteria like BBC 2005 and those based on linear transformations Chapter 5 describes advanced models for the prediction of forming limit curves developed by the authors Chapter 6 is devoted to anisotropic damage in elasto plastic materials with structural defects Finally Chapter 7 deals with modelling of the Portevin Le Chatelier PLC effect This volume contains contributions from leading researchers from the Technical University of Cluj Napoca Romania the Catholic University of Leuven Belgium Clausthal University of Technology Germany Amirkabir University of Technology Iran the University of Bucharest Romania and the Institute of Mathematics of the Romanian Academy Romania It will prove useful to postgraduate students researchers and engineers who are interested in the mechanical modeling and numerical simulation of sheet metal forming processes

Sheet Metal Forming Processes Dorel Banabic,2010-06-21 The concept of virtual manufacturing has been developed in order to increase the industrial performances being one of the most efficient ways of reducing the manufacturing times and improving the quality of the products Numerical simulation of metal forming processes as a component of the virtual manufacturing process has a very important contribution to the reduction of the lead time The finite element method is currently the most widely used numerical procedure for simulating sheet metal forming processes The accuracy of the simulation programs used in industry is influenced by the constitutive models and the forming limit curves models incorporated in their structure From the above discussion we can distinguish a very strong connection between virtual manufacturing as a general concept finite element method as a numerical analysis instrument and constitutive laws as well as forming limit curves as a specificity of the sheet metal forming processes Consequently the material modeling is strategic when models of reality have to be built The book gives a synthetic presentation of the research performed in the field of sheet metal forming simulation during more than 20 years by the members of three international teams the Research Centre on Sheet Metal Forming CERTETA Technical University of Cluj Napoca Romania AutoForm Company from Zurich Switzerland and VOLVO automotive company from Sweden The first chapter presents an overview of different Finite Element FE formulations used for sheet metal forming simulation now and in the past

Mechanical Behaviour of Materials J. Carlsson,2013-10-08 Mechanical Behaviour of Materials IV is a collection of papers dealing with engineering issues of the strength of materials solid mechanics and materials science One paper analyzes the growth of subcritical cracks subject to cyclic stresses as a result of fatigue or material microstructure Another paper shows the retention of maximum strength of some aircraft parts which have been in service for up to 20 years and subjected to stress

and exposure cycles due in part to the usage of high quality surface paint One paper discusses the regularities in deformation and failure of structural steels and alloys at cryogenic temperatures under conditions of static and cyclic low cycle loading The paper shows that the type of stress is evident in materials which lose their plastic properties as the temperature decreases The materials parameters that affect plastic instability and sheet formability are strain hardening strain rate sensitivity and plastic anisotropy Experiments indicate the importance of stress state large strains and path changes on the strain hardening response and subsequent stability of the material Another paper describes the relationship between microstructure and hydrogen embrittlement in aspects of fracture mechanics as well as the correlation between hydrogen embrittlement and carbon equivalent The collection can prove valuable for structural engineers materials engineers design engineers and investigators involved in the study of the strength of materials Publications of Los Alamos Research Los Alamos National Laboratory,1983 **The Integration of Material, Process and Product Design** R.
