

4 Formal semantic analysis

This part assesses your technical abilities in formal semantics, and your ability to apply your knowledge of composition to novel data. Your ability to do well in this exercise shows me that you haven't just memorized how computations work, and that you actually understand the mathematics of natural language meaning. As a reminder, you should not be looking on the internet for answers.

Do the following things:

1. Propose a denotation of the possessive pronoun *my*, using lambda calculus.
2. Give a full lambda computation of the sentence *My reindeer yawned*. Ignore tense. Give the lexical entries, tree annotated with types, and a step-by-step computation.
3. Give a brief discussion of your choice of analysis, and discuss any limitations of your proposal. If you think your analysis is fairly solid, discuss what considerations you made when coming up with your denotation of *my*. You will be assessed on the accuracy of the formalism and computation, and the thoughtfulness of your discussion.

3

Here are some things that might be helpful. Make sure you consider all uses of the possessive *my* in English, not just the one you see below. Assume the tree below for your computation.

- (1) $[me] = [I] = \mathbf{speaker}$ (this can be read as 'the speaker')
- (2) My reindeer yawned
- (3) Sven yawned (Note: Sven is a name.)
