

The general forms of uncertainty propagation for a value ($z + \delta z$) calculated from the product of two other values with some uncertainty ($x + \delta x$ and $y + \delta y$) are as follows:

Equation: $z = Ax^a y^b$

Uncertainty: $\delta z = z \sqrt{\left(a \frac{\delta x}{x}\right)^2 + \left(b \frac{\delta y}{y}\right)^2}$

And:

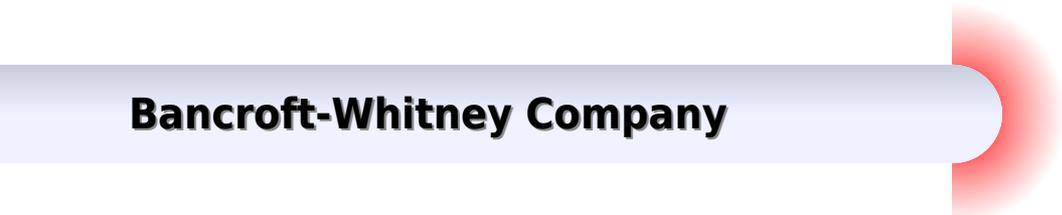

Equation: $z = ax + by$

Uncertainty: $\delta z = \sqrt{(a\delta x)^2 + (b\delta y)^2}$

1. In this laboratory activity, we will be using the equation $K = \frac{1}{2}mv^2$. We will have a value of uncertainty in the velocity ($v + \delta v$), and we want to propagate that uncertainty to the calculated kinetic energy ($K + \delta K$). From the generalized equations above, derive the equation you will use to propagate the uncertainty for K (i.e. $\delta K = \dots$).
2. We will also be measuring kinetic energy differences ($\Delta K = K_f - K_i$), in which both K_f and K_i have uncertainties. From the generalized equations above, derive the equation you will use to propagate the uncertainty for ΔK (i.e. $\delta(\Delta K) = \dots$).

Forms Of Uncertainty:

Cognitive Economics Bernard Walliser, 2007-10-25 Written in an informal way this book is addressed to philosophers or cognitive scientists curious of how economics deals with cognition and to graduate students in economics eager to discover how economics evolves It aims at extending the framework of game theory in order to better fit with the results of rapidly increasing laboratory experiments concerned with individual choices and collective interactions

Sustainable Coastal Management and Climate Adaptation Richard Kenchington, David Wood, Laura Stocker, 2012-09-06 Australians are famous for our love of the coast although in many places this love has caused serious and often irreversible impacts The sustainable management of our society's many uses of the coast is complex and challenging While a wealth of knowledge exists about the coast this is not always brought to bear on decision making Coastal management to date has had limited success and in some cases interventions have made problems worse Australia's coast has been shaped by severe events such as cyclones and floods with climate change now increasing the number and intensity of these hazards In addition our coastal populations are growing and with them our social environmental and economic vulnerability to such hazards This book explores the evolution of coastal management and provides critical insights into contemporary experience and understanding of coastal management in Australia It draws on contemporary theory and lessons from case examples to highlight the roles of research and community engagement in coastal management The book concludes with a chapter of recommendations which can help guide coastal management and research around the world
