Efficient Polymorphic Calls:

Efficient Polymorphic Calls Karel Driesen, 2012-12-06 The implementation of object oriented languages has been an active topic of research since the 1960s when the first Simula compiler was written The topic received renewed interest in the early 1980s with the growing popularity of object oriented programming languages such as C and Smalltalk and got another boost with the advent of Java Polymorphic calls are at the heart of object oriented languages and even the first implementation of Simula 67 contained their classic implementation via virtual function tables In fact virtual function tables predate even Simula for example Ivan Sutherland's Sketchpad drawing editor employed very similar structures in 1960 Similarly during the 1970s and 1980s the implementers of Smalltalk systems spent considerable efforts on implementing polymorphic calls for this dynamically typed language where virtual function tables could not be used Given this long history of research into the implementation of polymorphic calls and the relatively mature standing it achieved over time why one might ask should there be a new book in this field The answer is simple Both software and hardware have changed considerably in recent years to the point where many assumptions underlying the original work in this field are no longer true In particular virtual function tables are no longer sufficient to implement polymorphic calls even for statically typed languages for example Java's interface calls cannot be implemented this way Furthermore today's processors are deeply pipelined and can execute instructions out of order making it difficult to predict the execution time of even simple code sequences

Software and Hardware Techniques for Efficient Polymorphic Calls Karel Driesen, 1999 *Compiler Design* Dr. Divvela Srinivasa Rao, Dr. Prakash Bethapudi, V. Kiran Kumar, Dr. Gopikha Sundaramoorthy, 2025-11-18 This course covers the principles and techniques involved in the design and construction of compilers It introduces the structure of a compiler and its key phases including lexical analysis syntax analysis semantic analysis intermediate code generation code optimization and target code generation The course also explores symbol tables error handling parsing techniques and compiler tools providing students with a strong foundation in programming language processing and system level software development

ECOOP '91 European Conference on Object-Oriented Programming Pierre America, 1991-07-03 ECOOP 91 is the fifth annual European Conference on Object Oriented Programming From their beginning the ECOOP conferences have been very successful as a forum of high scientific quality where the newest developments connected to object oriented programming and related areas could be presented and discussed Over the last few years object oriented technology has gained widespread use and considerable popularity In parallel with this the field has matured scientifically but there is still a lot of room for new ideas and for hot debates over fundamental issues as these proceedings show The 22 papers in this volume were selected by the programme committee from 129 submissions Important issues discussed in the contributions are language design specification databases concurrency types and software development
