Formal Specification Of Advanced Ai Architectures:

Formal Specification of Advanced AI Architectures I. Craig, 1991 Software Software Engineering **Formal Specification of Advanced AI Architectures and Documentation Using Z** Iain D. Craig, 1991 Software Software Engineering **Formal Specification and Documentation Using Z** Jonathan Peter Bowen, 1996 Verification: Theory and Practice Nachum Dershowitz, 2004-02-24 This festschrift volume constitutes a unique tribute to Zohar Manna on the occasion of his 64th birthday Like the scientific work of Zohar Manna the 32 research articles span the entire scope of the logical half of computer science Also included is a paean to Zohar Manna by the volume editor The articles presented are devoted to the theory of computing program semantics logics of programs temporal logic automated deduction decision procedures model checking concurrent systems reactive systems hardware and software verification testing software engineering requirements specification and program synthesis *Z User Workshop, York 1991* J. E. Nicholls, 2012-12-06 In ordinary mathematics an equation can be written down which is syntactically correct but for which no solution exists For example consider the equation $x^2 = 1$ defined over the real numbers there is no value of x which satisfies it Similarly it is possible to specify objects using the formal specification language Z which can not possibly exist Such specifications are called inconsistent and can arise in a number of ways Example 1 The following Z specification of a function f from integers to integers $f(x) = 1$ if $x = 0$ $f(x) = 2$ if $x = 1$ $f(x) = 0$ if $x = 2$ is inconsistent because axiom i gives $f(0) = 1$ while axiom ii gives $f(0) = 2$ This contradicts the fact that f was declared as a function that is f must have a unique result when applied to an argument Hence no such f exists Furthermore iff $f(0) = 1$ and $f(0) = 2$ then $1 = 2$ can be deduced From $1 = 2$ anything can be deduced thus showing the danger of an inconsistent specification Note that all examples and proofs start with the word Example or Proof and end with the symbol \square *Z User Workshop, Cambridge 1994* J.P. Bowen, J.A. Hall, 2012-12-06 This volume contains papers from the Eighth Z User Meeting to be held at the University of Cambridge from 29-30 June 1994 The papers cover a wide range of issues associated with Z and formal methods with particular reference to practical application These issues include education standards tool support and interaction with other design paradigms such as consideration of real time and object oriented approaches to development Among the actual topics covered are the formal specification in Z of Defence Standard 00 56 formal specification of telephone features specifying and interpreting class hierarchies in Z and software quality assurance using the SAZ method *Z User Workshop Cambridge 1994* provides an important overview of current research into industrial applications of Z and will provide invaluable reading for researchers postgraduate students and also potential industrial users of Z **Towards Verified Systems** J. Bowen, 2013-10-22 As the complexity of embedded computer controlled systems increases the present industrial practice for their development gives cause for concern especially for safety critical applications where human lives are at stake The use of software in such systems has increased enormously in the last decade Formal methods based on firm mathematical foundations provide one means to help with reducing the risk of introducing errors during specification and

development There is currently much interest in both academic and industrial circles concerning the issues involved but the techniques still need further investigation and promulgation to make their widespread use a reality This book presents results of research into techniques to aid the formal verification of mixed hardware software systems Aspects of system specification and verification from requirements down to the underlying hardware are addressed with particular regard to real time issues The work presented is largely based around the Occam programming language and Transputer microprocessor paradigm The HOL theorem prover based on higher order logic has mainly been used in the application of machine checked proofs The book describes research work undertaken on the collaborative UK DTI SERC funded Information Engineering Directorate Safemos project The partners were Inmos Ltd Cambridge SRI the Oxford University Computing Laboratory and the University of Cambridge Computer Laboratory who investigated the problems of formally verifying embedded systems The most important results of the project are presented in the form of a series of interrelated chapters by project members and associated personnel In addition overviews of two other ventures with similar objectives are included as appendices The material in this book is intended for computing science researchers and advanced industrial practitioners interested in the application of formal methods to real time safety critical systems at all levels of abstraction from requirements to hardware In addition material of a more general nature is presented which may be of interest to managers in charge of projects applying formal methods especially for safety critical systems and others who are considering their use
