

EVOLUTION OF STARS

After 10 billion years, the small star will run out of hydrogen and starts fusing helium, which causes the star to expand to a red giant

www.pmfias.com

Planetary Nebula

After the star runs out of helium, the star will try to combine carbon, which the star can't combine. So the gas spreads apart from the star leaving behind a carbon dense white dwarf.

White Dwarf

When the white dwarf runs out of its remaining energy, it loses its brightness and becomes a brown dwarf.

After the star explodes, the star can do two different things based on its size

1. It can form a very dense NEUTRON STAR
2. It can form the most densest object in the universe, a BLACK HOLE

Neutron Star

When a massive star runs out of hydrogen, it expands and will make all kind of elements until it starts forming Iron

Formation And Evolution Of Star Clusters:

The Formation and Evolution of Star Clusters Kenneth Janes, 1991 **The Formation and Evolution of Star Clusters** Simon Goodwin, Nate Bastian, 2013-09-01 In the past decade our picture of star and cluster formation has changed hugely we now believe that many if not most stars form in clusters and the process of star and cluster formation is extremely rapid and dynamic This book will provide an overview of our current understanding of the formation and evolution of star clusters This book will cover our understanding of how gas turns into stars and the structure and kinematics of very young star forming regions It will then describe how we think these young star forming regions evolve into clusters before destroying themselves It will also cover our understanding of young clusters in external galaxies especially starbursts and how these populations could evolve into globular cluster systems **Formation and Evolution of Star Clusters and Their Host Galaxies** J. M. D. Kruijssen, 2011 *On the Formation and Evolution of Stars and Star Clusters in the Milky Way* Michael J. Alexander, University of Wyoming. Department of Physics and Astronomy, 2012 Since the launch of the Spitzer Space Telescope the field of star formation SF has undergone a revolution as regions of our Galaxy once hidden have been revealed Large scale surveys have provided fodder on a myriad of topics both expected and unexpected The following work highlights my contributions to the fields of Galactic SF and cluster evolution My dissertation begins in Chapter 2 with the discovery of a massive star cluster containing more than a dozen red supergiant stars Based on the number of supergiants it is one of the largest star clusters in the Galaxy and it is now believed to be part of a burst of SF that created over $10^5 M_{\odot}$ of stars in just a few Myr Chapter 3 is my paper on a very different type of star cluster which we termed ultracompact embedded clusters UCECs UCECs may represent a new class of heavily embedded M_{\odot} subcompact gas $100 M_{\odot}$ low stellar mass M **Formation and Early Evolution of Stellar Clusters** Joshua E. Wall, 2019 We describe a novel numerical method for the studying the formation and evolution of stellar clusters Torch This method combines the magnetohydrodynamics code Flash with the Astrophysical Multipurpose Software Environment AMUSE Once embedded into AMUSE we combine Flash with the stellar evolution code SeBa the N body dynamics code ph4 and the multiple star system evolution module multiples to create a unique method for tracing the detailed evolution of stellar clusters through time We then add units for radiation stellar winds and supernovae as well as a new star by star formation prescription to Flash that allows for star formation and stellar feedback to create and destroy star clusters and the interstellar gas they form from The result is the most detailed star cluster formation code to date We then demonstrate the use of these methods for studying binary star formation and the effects of stellar feedback We find that massive dynamical binaries created in our simulations are consistent with observations Further we observe that wide dynamical binaries tighten due to gas dynamical friction losing cluster energy to the natal gas after which they are disrupted by stellar encounters This supports theoretical predictions that embedded clusters may contract due to the interactions of gas and stars We also find that while stellar

feedback is effective at expelling gas from natal clusters the clusters themselves remain bound even as they expand due to the loss of the binding potential of the gas Finally stellar clusters formed in our simulations mass segregate before the expulsion of their natal gas clouds as expected from observations of young clusters in the Milky Way

Evolution of Stars and Stellar Populations Maurizio Salaris, Santi Cassisi, 2005-12-13 Evolution of Stars and Stellar Populations is a comprehensive presentation of the theory of stellar evolution and its application to the study of stellar populations in galaxies Taking a unique approach to the subject this self contained text introduces first the theory of stellar evolution in a clear and accessible manner with particular emphasis placed on explaining the evolution with time of observable stellar properties such as luminosities and surface chemical abundances This is followed by a detailed presentation and discussion of a broad range of related techniques that are widely applied by researchers in the field to investigate the formation and evolution of galaxies This book will be invaluable for undergraduates and graduate students in astronomy and astrophysics and will also be of interest to researchers working in the field of Galactic extragalactic astronomy and cosmology comprehensive presentation of stellar evolution theory introduces the concept of stellar population and describes stellar population synthesis methods to study ages and star formation histories of star clusters and galaxies presents stellar evolution as a tool for investigating the evolution of galaxies and of the universe in general

Dynamics of Young Star Clusters and Associations Cathie Clarke, Robert D. Mathieu, Iain Neill Reid, 2015-09-11 Where do most stars and the planetary systems that surround them in the Milky Way form What determines whether a young star cluster remains bound such as an open or globular cluster or disperses to join the field stars in the disc of the Galaxy These questions not only impact understanding of the origins of stars and planetary systems like our own and the potential for life to emerge that they represent but also galaxy formation and evolution and ultimately the story of star formation over cosmic time in the Universe This volume will help readers understand our current views concerning the answers to these questions as well as frame new questions that will be answered by the European Space Agency's Gaia satellite that was launched in late 2013 The book contains the elaborated notes of lectures given at the 42nd Saas Fee Advanced Course Dynamics of Young Star Clusters Associations by Cathie Clarke University of Cambridge who presents the theory of star formation and dynamical evolution of stellar systems Robert Mathieu University of Wisconsin who discusses the kinematics of star clusters and associations and I Neill Reid Space Telescope Science Institute who provides an overview of the stellar populations in the Milky Way and speculates on from whence came the Sun As part of the Saas Fee Advanced Course Series the book offers an in depth introduction to the field serving as a starting point for Ph D research and as a reference work for professional astrophysicists

[The Birth of Star Clusters](#) Steven Stahler, 2017-11-04 All stars are born in groups The origin of these groups has long been a key question in astronomy one that interests

researchers in star formation the interstellar medium and cosmology This volume summarizes current progress in the field and includes contributions from both theorists and observers Star clusters appear with a wide range of properties and are born in a variety of physical conditions Yet the key question remains How do diffuse clouds of gas condense into the collections of luminous objects we call stars This book will benefit graduate students newcomers to the field and also experienced scientists seeking a convenient reference

Star Clusters (IAU S266) International Astronomical Union. Symposium,2010-02-04 Star clusters are important to many areas of astronomy and as the basic building blocks of galaxies they can be used as key diagnostic tools within a wide range of disciplines in astrophysics Star cluster populations are powerful tracers of the formation assembly and evolutionary history of their parent galaxies Although their importance has been recognised for decades only in recent years has this area seen a major investment in time and effort IAU Symposium 266 consolidates the expertise of leading researchers from a variety of topical subfields in astrophysics to provide a comprehensive presentation of cutting edge developments in theory observations and simulations of star clusters and star cluster systems across a range of sizes and epochs This volume gives an account of this forefront research answering fundamental questions that will improve our understanding of numerous related issues and show how this field will take its next major step forward

The Formation and Early Evolution of Stars Norbert S. Schulz,2012-05-24 Starburst regions in nearby and distant galaxies have a profound impact on our understanding of the early universe This new substantially updated and extended edition of Norbert Schulz s unique book From Dust to Stars describes complex physical processes involved in the creation and early evolution of stars It illustrates how these processes reveal themselves from radio wavelengths to high energy X rays and gamma rays with special reference towards high energy signatures Several sections devoted to key analysis techniques demonstrate how modern research in this field is pursued and new chapters are introduced on massive star formation proto planetary disks and observations of young exoplanets Recent advances and contemporary research on the theory of star formation are explained as are new observations specifically from the three great observatories of the Spitzer Space Telescope the Hubble Space Telescope and the Chandra X Ray Observatory which all now operate at the same time and make high resolution space based observing in its prime As indicated by the new title two new chapters have been included on proto planetary disks and young exoplanets Many more colour images illustrate attractive old and new topics that have evolved in recent years The author gives updates in theory fragmentation dust and circumstellar disks and emphasizes and strengthens the targeting of graduate students and young researchers focusing more on computational approaches in this edition

Multi-scale Approach of the Formation and Evolution of Star Clusters Julien Dorval,2016 Young star clusters are substructured and undergo a dynamical evolution erasing this substructure to form relaxed spherical clusters I present a new method to generate realistic initial conditions to perform N body simulations of this process the Hubble Lemaitre fragmentation By expanding an initially uniform sphere I allow spontaneous overdensities

to grow creating a realistic model for young clumpy stellar systems This method is validated by analysing the distribution and content of the clumps and comparing them to hydrodynamical simulations of star formation as well as observations of star forming regions These systems undergo a softer collapse than uniform ones I injected binary stars in the fragmented models and found they were heavily processed when substructure was present I also found extreme short and tight binaries down to 0.01 AU to form in the models The method has a lot of potential such as the generation of mock observations of star forming regions

Star Clusters in the Era of Large Surveys André Moitinho, Joao Alves, 2011-10-20 The symposium Star Clusters in the Era of Large Surveys was held in Lisbon on Sep 9-10 during the JENAM 2010 It served as a platform for discussing what and how recent on going and planned large area ground based and space based surveys can contribute to producing a major leap in this research field which has a strong European history Scientific topics addressed included cluster searches clustered vs isolated star formation large scale star formation enrichment of the field population structure populations and evolution of the Milky Way cluster dynamics internal and within the Milky Way variability of stars in clusters from time resolved surveys analysis techniques for large samples and archiving This proceedings book provides a snapshot of the ongoing discussion on the role of large surveys in star cluster research and serves as a reference volume for the state of the art in the field

Star Clusters B.W. Carney, W.E. Harris, 2000-12-12 Star clusters are at the heart of astronomy being key objects for our understanding of stellar evolution and galactic structure Observations with the Hubble Space Telescope and other modern equipment have revealed fascinating new facts about these galactic building blocks This book provides two comprehensive and up to date pedagogically designed reviews on star clusters by two well known experts in the field Bruce Carney presents our current knowledge of the relative and absolute ages of globular clusters and the chemical history of our Galaxy Bill Harris addresses globular clusters in external galaxies and their use as tracers of galaxy formation and cosmic distance indicators The book is written for graduate students as well as professionals in astronomy and astrophysics
