Thought Herbert Alexander Simon, 1979-01-01 Nobel Laureate Herbert A Simon has in the past quarter century been in the front line of the information processing revolution in fact to a remarkable extent his and his colleagues contributions have written the history of that revolution in cognitive psychology Research in this burgeoning new branch of knowledge seeks to describe with precision the workings of the human mind in terms of a small number of basic mechanisms organized into strategies Newly developed computer languages express theories of mental processes so that computers can then simulate the predicted human behavior This book brings together papers dating from the start of Simon s career to the present Its focus is on modeling the chief components of human cognition and on testing these models experimentally After considering basic structural elements of the human information processing system especially search selective attention and storage in memory Simon builds from these components a system capable of solving problems inducing rules and concepts perceiving and understanding These essays describe a relatively austere simple and unified processing system capable of highly complex and various tasks They provide strong evidence for an explanation of human thinking in terms of basic information processes

An Approach to Knowledge Base Management Nelson Mendonça Mattos, 1991 This book addresses the development of a new generation of systems Knowledge Base Management Systems KBMS specially constructed for effective and efficient management of knowledge bases with the aim of filling part of the technological gap between artificial intelligence and databases The book first investigates in detail the design process the architecture and the working methods of knowledge based systems KS in order to point out the key characteristics of the field as well as its current limitations which serve then as basis for an exact formulation of KS requirements An analysis and evaluation of other approaches e g conventional DBS non standard DBS coupling expert systems and DBS to knowledge management is given The book shows that in developing KBMS the experience obtained by the investigation of each of these approaches is extremely important since they provide the basic concepts for building KBMS The approaches should not be viewed as complete and final but as part of research work towards KBMS A novel architecture is described for KBMS which integrates the functionality flexibility and modeling power of DBS and AI The main part of the book deals with all important architectural problems of KBMS methods for knowledge representation with special emphasis on abstraction concepts language proposals and concepts for performance improvement The book is based on practical experience accumulated over five years of successful research in coupling existing expert systems and DBS extending DBS with deductive capabilities and above all in the design and implementation of a KBMS prototype Thus the book s proposals are illustrated with detailed descriptions of their realization in existing systems or prototypes PUBLISHER S WEBSITE

book of the Artificial Intelligence field **Computational Collective Intelligence** Tadeusz M. Szuba,2001-03-07
 Introducing a groundbreaking approach to understanding measuring and applying Collective Intelligence Does Collective Intelligence CI exist and if so how can it be characterized quantified and harnessed Questions such as these continue to be hotly debated within both the scientific and philosophical communities Yet few researchers working in the fields of artificial intelligence or distributed computing doubt CI s enormous potential value to the future of computing Unfortunately for lack of a rigorous formal theory of Collective Intelligence most attempts to analyze CI systems have been disappointing at best In Computational Collective Intelligence Professor Tadeusz Szuba does much to rectify that situation by developing for the first time both a formal definition of CI and practical guidelines for its assessment and applications Working from the ground up Dr Szuba begins with a stimulating and insightful discussion of the types of intelligence including individual artificial and collective into which he brings ideas from AI information theory and distributed computing as well as psychology sociology animal behavior cognitive science and other relevant disciplines He tackles the problem of computational models for simulating and measuring CI He explores all theoretically feasible models of CI computations and presents a groundbreaking nondeterministic approach using the Random PROLOG Processor RPP as a CI modeling and evaluation tool He then introduces the Collective Intelligence Quotient IQS and develops clear cut guidelines for measuring it In the final chapters he lays the foundation for a dynamic new discipline Collective Intelligence Engineering CIE and considers its potential applications as an organizational restructuring tool **Digital Computers in Analytical Chemistry: 1970-1978** J.
