Geometry Of Environment An Introduction To Spatial Organization In Design:

The Geometry of Environment Lionel March, Philip Steadman, 2020-10-31 Originally published in 1971 The Geometry of Environment is a fusion of art and mathematics introducing stimulating ideas from modern geometry using illustrations from architecture and design The revolution in the teaching of mathematics and the advent of the computer in design challenge traditional ways of appreciating the space about us and expand the structural understanding of our surroundings through such concepts as transformations symmetry groups sets and graphs This book aims to show the relevance of new maths and encourages exploration of the widening intellectual horizons of environmental design and architecture

Empathic Space Christian Derix, Åsmund Izaki, 2014-10-27 In recent years questions of space have gained renewed momentum in architecture and urban design as adaptation densification and sustainable regeneration have become an increasing priority While most computing based design tends to emphasise the formal aspects of architecture overlooking space and its users the original computational design approaches first spearheaded in the UK in the 1960s and 1970s tended to be focused on behavioural and occupational patterns Over the last decade a new generation of design research has emerged that has started to implement and validate previous investigations into spatial computation aiming to understand how to design spatial configurations based on user experiences This revives an interest in the experiential that was first explored in the early 20th century by German and Nordic organic architects who invented design methods that correlated cognitive responses of buildings occupants to spatial structure The current revival of human centric design however represents the first design approach that synthesises spatial design and algorithmic techniques with organic design thinking which could also be regarded as a return to the first principles of architectural design Contributors include Paul Coates Christian Derix Olafur Eliasson Lucy Helme Bill Hillier smund Izaki Prarthana Jagannath Dan Montello Juhani Pallasmaa Philip Steadman and Guy Theraulaz Featured Architects Designers Jussi ngeslev Art Com Stan Allen Aedas R D Markus Braach Kaisersrot Hermann Hertzberger Kazuhiro Kojima Cat Pablo Miranda and Rafi Segal

Architectural and Urban Subsymmetries Jin-Ho Park, 2022-09-24 This book focuses on symmetries in the analysis and synthesis of architectural designs Crucial in the history of architecture principles of symmetry provided the means to achieve balance and harmony of spatial composition in architecture Less well known is the importance of symmetry principles in the analysis of the distinct constituents in a contemporary architectural design which may at first glance appear disorganized or even random The revelation of different hierarchical levels wherein various types of symmetry or subsymmetry are superimposed provides a key for deciphering the underlying structure of spatial logic The interaction between local and global subsymmetries is of particular interest Operating with symmetry concepts in this manner offers architects designers and students an explicit method for understanding the symmetrical logics of sophisticated designs and gaining insights into new designs This book has two complementary objectives to explore the fundamental principles of architectural composition founded on the algebraic

structure of symmetry groups in mathematics and to apply the principles in the analysis and synthesis of architectural and urban designs By viewing and decomposing architectural and urban designs in this manner the hidden spatial logic and underlying order in a design become transparent *Space Syntax* Laura Vaughan,John Peponis,Ruth Conroy Dalton,2025-04-30 Professor Bill Hillier spent most of his career at The Bartlett University College London where he founded and developed with a team of colleagues an original research programme that set the study of architecture on a firm scientific basis His transformational way of thinking about buildings and cities influenced generations of scholars researchers and practitioners within the built environment disciplines and way beyond in fields ranging from archaeology and biology to physics and zoology *Space Syntax Selected papers* by Bill Hillier provides a canon of works that reflects the progression of Hillier s ideas from the early publications of the 1970s to his most recent work published before his death in 2019 This selection of influential works ranges from his papers on architecture as a professional and research discipline through to his later papers that present a theory of the spatial structure of the city and its social functions By bringing together writing from across his career span of half a century with specially commissioned introductions by a wide range of international experts in the field we are able to contextualise and show the range and evolution of Hillier s key ideas [Disruptive Technologies: The Convergence of New Paradigms in Architecture](#) Philippe Morel,Henriette Bier,2023-05-02 Through a series of highly speculative contributions by both leading and highly acclaimed practitioners and theorists this book gives a new comprehensive overview of architectures most recent practical and theoretical developments While a few chapters are mostly dedicated to a historical analysis of how we got to experience a new technological reality in architecture and beyond all chapters including the most forward looking have in common their rigorous understanding of history as a pool of radical experiments whether one speaks of the history of architecture or of sociology technology and science *Disruptive Technologies The Convergence of New Paradigms in Architecture* is required reading for anybody student practitioner and educator who wants to do serious research in architecture and all disciplines dealing with the shaping of our environment beyond the important but restricted domain of computational architectural design Additional multimedia content via app download the SN More Media app for free scan a link with play button and access to the Additional Contents directly on your smartphone or tablet *ACM SIGGRAPH 88* ,1988 **Architecture Series: Bibliography** ,1985 [Eco-architecture III](#) Santiago Hernández,2010-03-16 This book contains most of the papers presented in the Eco Architecture 2010 conference which was the third edition of the International Conference on Harmonisation between Architecture and Nature Previous editions that were very successful were held previously in the New Forest UK in 2006 and the Algarve Portugal in 2008 and demonstrated the importance of a forum like this to discuss the characteristics and challenges of such architectural vision Eco Architecture implies a new approach to the design process intended to harmonise its products with nature This involves ideas such as minimum use of energy at each stage of the building process taking into account the amount required during

the extraction and transportation of materials their fabrication assembly building erection maintenance and eventual future recycling Presentations in the conference were related to topics like building technologies design by passive systems design with nature ecological and cultural sensitivity life cycle assessment quantifying sustainability in architecture resources and rehabilitation and issues from education research and practice Case studies from different places around the world were also presented Design Methods ,1994 **ISUF 1999** International Seminar on Urban Form (Organization),1999
