Genetic Switch:

A Genetic Switch Mark Ptashne, 2004 The first edition of Mark Ptashne's 1986 book describing the principles of gene regulation in phage lambda became a classic in both content and form setting a standard of clarity and precise prose that has rarely been bettered This edition is a reprint of the original text together with a new chapter updating the story to 2004 Among the striking new developments are recent findings on long range interactions between proteins bound to widely separated sites on the phage genome and a detailed description of how gene activation works

Adapting Minds David J. Buller, 2006-02-17 Was human nature designed by natural selection in the Pleistocene epoch The dominant view in evolutionary psychology holds that it was that our psychological adaptations were designed tens of thousands of years ago to solve problems faced by our hunter gatherer ancestors In this provocative and lively book David Buller examines in detail the major claims of evolutionary psychology the paradigm popularized by Steven Pinker in *The Blank Slate* and by David Buss in *The Evolution of Desire* and rejects them all This does not mean that we cannot apply evolutionary theory to human psychology says Buller but that the conventional wisdom in evolutionary psychology is misguided Evolutionary psychology employs a kind of reverse engineering to explain the evolved design of the mind figuring out the adaptive problems our ancestors faced and then inferring the psychological adaptations that evolved to solve them In the carefully argued central chapters of *Adapting Minds* Buller scrutinizes several of evolutionary psychology's most highly publicized discoveries including discriminative parental solicitude the idea that stepparents abuse their stepchildren at a higher rate than genetic parents abuse their biological children Drawing on a wide range of empirical research including his own large scale study of child abuse he shows that none is actually supported by the evidence Buller argues that our minds are not adapted to the Pleistocene but like the immune system are continually adapting over both evolutionary time and individual lifetimes We must move beyond the reigning orthodoxy of evolutionary psychology to reach an accurate understanding of how human psychology is influenced by evolution When we do Buller claims we will abandon not only the quest for human nature but the very idea of human nature itself
