Globalization, Information Technology and Development J. James,1999-02-24 Jeffrey James

develops the insights of the often separate literatures on globalization and information technology and demonstrates their interdependence. The central insight is that globalization is mainly a technological phenomenon driven by influences exerted on international trade and foreign investment by various forms of information technology. Developing countries however are not sharing equally in the gains from globalization thus induced by the new technologies. These gains tend to be concentrated among a narrow group of relatively advanced countries and moreover within some of those countries information technology appears to exacerbate existing income inequalities.

American Technology Policy

J. D. Kenneth Boutin, 2012-12-31 Since the end of the Cold War U.S. policymakers have faced the challenge of addressing the technological requirements of both economic competitiveness and national security. Promoting the technological objectives of competitiveness and security poses a daunting task as these objectives can differ significantly in terms of autonomy the private sector's role and the time frame involved. The difficulties inherent in meeting these competing needs for technological investment and resources are exacerbated by growing technological globalization. American Technology Policy analyzes the ongoing efforts of politicians legislators policymakers and industry leaders to balance their often conflicting technological requirements. J. D. Kenneth Boutin examines recent trends and developments in American technology policy as it strives to support high technology firms without undermining national security. He then considers issues of autonomy relations between the federal government and industry and the time frame involved in formulating and implementing policy initiatives all in the context of globalization. Though satisfying the ambitious American technological agenda is difficult it is impossible for authorities to avoid making the effort given the high stakes involved. Boutin's analysis is intended to inform those who are charged with prioritizing and balancing the technological needs of national defense and economic growth. Although the post Cold War technology policy of the United States has been characterized by efforts to achieve a balance between these two competing priorities the dominant focus remains on national security. Boutin explains the ways in which American authorities seek to limit the extent of compromise necessary by working with local and foreign actors and by encouraging structural changes in the environment for technological development application and diffusion.
