This book puts forward a technological system for the construction of subsea tunnel using drilling and blasting method  
Taking the water induced disaster as the core risk the safety guarantee system for large cross sectional subsea tunnels is  
established The composite grouting technology referred to ground reinforcement and water plugging is established which  
breaks through the technical bottleneck of subsea tunnel construction in highly permeable strata The process control theory  
based on water inrush mechanism is created which gets rid of the over dependence on engineering experience for disaster  
control of submarine tunnel An active control waterproof drainage system based on the synergy of reinforcement ring and  
support system is invented to solve the contradiction between the control of water displacement and water pressure The  
above mentioned achievements have been successfully applied in the first three large cross sectional subsea tunnels in China  
and have played a key role in the construction safety The proposed technological system can improve the overall construction  
level of subsea tunnel which can provide reference for the design and construction of subsea tunnels especially for those  
crossing through weakness zones *Shield Construction Techniques in Tunneling* Kui Chen,Jiangka Wang,Shengjun  
Jiao,2021-02-05 *Shield Construction Techniques in Tunnelling* presents the latest on this fast environmentally friendly and  
relatively safe construction technique reflecting on its technical risks and challenges as seen in China Sections introduce the  
type of shields the history of the technique shielding principles selection management the latest techniques in operation  
consider engineering cases discuss construction in gravel soft soil composite and rock strata and present video clips of  
construction that are accessible through QR codes embedded in the text The book combines theory and practical experience  
giving the reader unique insights into shield equipment and construction techniques The shield tunneling technique is being  
used very widely particularly in China which is building urban rail transit systems at an unparalleled scale and speed The use  
of tunneling shields provides a fast relatively safe and ecologically friendly method for the construction of tunnels However a  
number of incidents have shown the risks involved in tunnelling through geologically complex areas Gives the principles and

practice of shield construction techniques including shield selection and operation Demonstrates the latest technologies in shield construction that can be applied in practice Reflects on the technical risks and challenges of shield construction based on extensive use of the technique for tunnel construction in China Discusses challenges in construction in gravel soft soil composite and rock strata Provides engineers with applicable insights into shield equipment and construction techniques

**Advanced Engineering and Technology II** Liquean Xie,2015-03-19 Advanced Engineering and Technology II collects recent essential ideas and advanced techniques to overcome the current engineering issues in civil engineering environmental engineering water science and hydraulic engineering energy and chemical engineering and other related fields The 60 technical papers from the 2nd Annual Congress on Advance Key Construction Techniques for Large Diameter Shield Tunnel Crossing Circular Ventilation Shaft Zhanhu Yao,Yazhou Zhang,Hui Li,2024-07-24 Based on the construction of Nanjing Weisan Road Yangtze River Tunnel this book comprehensively introduces the new technology of large diameter shield tunnel construction crossing circular air shafts It focuses on four aspects the construction technology of super deep circular air shaft foundation pit retaining structure in the sensitive environment near the river underwater excavation and underwater massive concrete sealing bottom construction technology adaptive improvement of TBM and construction technology of crossing air shaft and control technology of super deep foundation pit stability during the process of conversion This book combines theory with practice and can provide reference for shield engineering construction It can also be used as a reference for engineering and technical personnel researchers teachers and students in related majors in colleges who are engaged in shield tunnel engineering

**Advances in Geomechanics Research and Application for Deep Unconventional Reservoirs** Peng Tan,Liuke Huang ,Huiwen Pang,Wenda Li,2024-11-11 Deep unconventional oil and gas reservoirs such as shale oil gas tight oil gas coalbed methane CBM oil shale etc are commonly characterized by geological and structural complexity increased formation temperature and pressure and complex in situ stress fields Geomechanics research is helpful to understand the in situ stress of complex structures faults and natural fracture systems in deep blocks Field practice shows

that insufficient geomechanics understanding can easily result in low drilling efficiency long construction period frequent occurrence of complex situations and unsatisfactory fracturing effects In recent years geomechanics applied to drilling completion hydraulic fracturing and production in unconventional reservoirs has achieved great progress producing various advanced experimental and numerical approaches and applications However as the buried depth increases the complicated geology conditions make it more and more difficult for the engineering reconstructions which poses a great threat to the efficient development of deep resources New knowledge and understandings of geomechanics are urgently needed to guide the development of unconventional oil gas reservoirs and the related theory experiment and simulation studies are rapidly developing
