Exploring Automatic Features Vol3:

Internet of Things and Analytics for Agriculture, Volume 3 Prasant Kumar Pattnaik, Raghvendra Kumar, Souvik Pal, 2021-11-10 The book discusses one of the major challenges in agriculture which is delivery of cultivate produce to the end consumers with best possible price and quality. Currently all over the world it is found that around 50% of the farm produce never reaches the end consumer due to wastage and suboptimal prices. The authors present solutions to reduce the transport cost, predictability of prices on the past data analytics and the current market conditions and number of middle hops and agents between the farmer and the end consumer using IoT based solutions. Again the demand by consumption of agricultural products could be predicted quantitatively however the variation of harvest and production by the change of farm's cultivated area, weather change, disease and insect damage etc could be difficult to be predicted so that the supply and demand of agricultural products has not been controlled properly. To overcome this, the edited book designed the IoT based monitoring system to analyze crop environment and the method to improve the efficiency of decision making by analyzing harvest statistics. The book is also useful for academicians working in the areas of climate changes.

Handbook of Learning and Cognitive Processes (Volume 3) William K. Estes, 2014-06-20 Originally published in 1976, Volume 3 of this Handbook deals primarily with conditions of acquisition, retention and forgetting and the manner in which acquired information and motivation combine to determine performance. The organization of this volume can be understood in terms of four principal categories. The first category deals with general problems of methodology, the second and third with basic concepts arising from research on human learning and performance and the fourth with applications. Volume 1 presented an overview of the field and introduced principal theoretical and methodological issues that persistently recurred in the expanded treatment of specific research areas which comprise the later volumes. The areas traditionally associated with conditioning, learning theory and the basic psychology of human learning are treated in Volumes 2 and 3. The last three volumes will range over active lines of research having to do with human cognitive processes at the time. Volume 4: attention, memory storage and retrieval. Volumes 5 and 6: information processing, reading, semantic memory and problem solving.

Intelligent Computing Kohei Arai, 2021-07-05 This book is a comprehensive collection of chapters focusing on the core areas of computing and their further applications in the real world. Each chapter is a paper presented at the Computing Conference 2021 held on 15-16 July 2021. Computing 2021 attracted a total of 638 submissions which underwent a double-blind peer review process. Of those 638 submissions, 235 submissions have been selected to be included in this book. The goal of this conference is to give a platform to researchers with fundamental contributions and to be a premier venue for academic and industry practitioners to share new ideas and development experiences. We hope that readers find this volume interesting and valuable as it provides the state of the art intelligent methods and techniques for solving real world problems. We also expect that the conference and its publications is a trigger for further related research and technology improvements.
