Planetary Exploration Horizon 2061

Michel Blanc, 2022-10-28 *Planetary Exploration Horizon 2061 A Long Term Perspective for Planetary Exploration* synthesizes all the material elaborated and discussed during three workshops devoted to the Horizon 2061 foresight exercise. Sections cover the science of planetary systems, space missions to solar system objects, technologies for exploration and infrastructures and services to support the missions and to maximize their science return. The editors follow the path of the implementation of a planetary mission from the needed support in terms of navigation and communication through the handling of samples returned to Earth to the development of more permanent infrastructures for scientific human outposts on the Moon and Mars. This book also includes a special chapter entirely devoted to contributions from students and early career scientists, the Horizon 2061 generation, and a final chapter on important avenues for the actual implementation of the planetary missions coming out of our Dreams for Horizon 2061. International cooperation and the growing role and initiatives of private enterprise in planetary exploration. Provides a logical link between scientific questions and the technologies needed to thoroughly address them. Organized chapters present a logical road map of subjects while also stimulating a cross disciplinary understanding of the scientific and technical challenges of planetary exploration. Contains illustrations and tables that capture and synthesize knowledge of a broad readership. [Spacecraft that Explored the Inner Planets Venus and Mercury](#)

Thomas Lund, 2023-07-03 *A series of increasingly capable spacecraft were sent to explore the inner planets Venus and Mercury*. The history of that planetary exploration is traced in this book along with the evolution of sophisticated spacecraft that unveiled long sought secrets of the planets. The spacecraft were ingenious and reflected the best efforts of talented people working with the available technology of the day. Additionally, this book showcases engineering involved in those capable machines. A consecutive series of 34 planetary spacecraft which span the time period 1961 to 2021 are described. This includes the unsuccessful missions of several early spacecraft that paved the way for a better understanding of Venus hostile environments. This book will describe many successful spacecraft sent to Venus by the Soviet Union and many successful spacecraft sent to Venus and to Mercury by the United States. The recent exploration of Venus by the European Space Agency's Venus Express and the Japanese spacecraft Akatsuki can also be found in this book. The author draws on over 50 years of experience on aircraft and spacecraft systems to tell the story of these planetary spacecraft. The spacecraft experience includes being the technical lead for the landing radars on the Surveyor and Apollo lunar landers as well as providing analyses for the rendezvous radar for the Space Shuttle. Practical engineering experience is augmented by Master's degrees in electrical engineering, physics, and business administration. *The Ethics of Space Exploration*

James S.J. Schwartz, Tony Milligan, 2016-07-25 *This book aims to contribute significantly to the understanding of issues of value including the ultimate value of space related activities which repeatedly emerge in interdisciplinary discussions on space and society. Although a recurring feature of discussions about space in the humanities, the treatment of value questions has tended to be patchy of uneven quality and even on occasion idiosyncratic rather than drawing upon a close familiarity with*

state of the art ethical theory One of the volume s aims is to promote a more robust and theoretically informed approach to the ethical dimension of discussions on space and society While the contributions are written in a manner which is accessible across disciplines the book still withstands scrutiny by those whose work is primarily on ethics At the same time it allows academics across a range of disciplines an insight into current approaches toward how the work of ethics gets done The issues of value raised could be used to inform debates about regulation space law and protocols for microbial discovery as well as longer range policy debates about funding
