Object-Oriented Graphics Peter Wisskirchen,2012-12-06 At present object oriented programming is emerging from the research labora tories and invading into the field of industrial applications More and more products have been implemented with the aid of object oriented programming techniques and tools usually as extensions of traditional languages in hybrid development systems Some of the better known examples are OSF Motif News Objective C on the NeXT computer the C extension C and CLOS an object oriented extension of LISP All of these developments incorporate interactive graphics Effective object oriented systems in combination with a graphics kernel does it mean that the field of computer graphics has

now become merely an aspect of the object oriented world We do not think so In spite of interesting individual developments there are still no sound object oriented graphics systems available If it is desired to develop a complex graphics application embedded in a window oriented system then it is still necessary to work with elementary tools What is to be displayed and interactively modified inside a window must be specified with a set of graphics primitives at a low level or has to be written with a standardized graphics kernel system such as GKS or PHIGS i e by kernels specified and implemented in a non object oriented style With the terms GKS and PHIGS we enter the world of international graphics standards GKS and PHIGS constitute systems not mere collections of graphics primitives
