Realist Trials and Systematic Reviews Chris Bonell, G. J. Melendez-Torres, Emily Warren, 2024-02-15 This book describes an innovative approach to the evaluation of complex health interventions assessing

what interventions work how and for whom Rejecting the stalemate between trials and realist evaluation it draws on the best of both Randomised controlled trials and systematic reviews offer the least biased means of assessing intervention effects but tell us little scientifically about how interventions work Policy makers and practitioners are also not supported to decide which interventions are likely to achieve most benefits in their local contexts Realists use other forms of evaluation and evidence synthesis exploring how intervention mechanisms interact with context to generate outcomes But these approaches lack rigour in assessing causality This book proposes how realist evaluation methods may be incorporated within randomised controlled trials and systematic reviews This enables evaluations and evidence synthesis to benefit from the more nuanced questions posed within realist enquiry while maintaining rigour in assessing causality **Technical Report Series** ,2006

Social Work Ethics Eileen Gambrill,2017-05-15 This collection of essays highlights ethical issues in social work which are often overlooked as well as recurring clashes that influence how they play out for example among different values and related moral judgements A wide range of ethical issues are addressed such as the types of technologies incorporated into social work issues raised by the common position of social workers as double agents required to carry out state mandates while also honoring obligations to clients and issues concerning the distribution of scarce resources These topics are integrally related to other often neglected concerns such as harming in the name of helping the ethics of claims making regarding what is true and what is not and related concerns regarding empowerment and social justice This collection which includes essays from an array of professions and disciplines is designed to bring these neglected topics to the attention of readers and to offer suggestions for addressing them in a manner that is faithful to obligations described in social work codes of ethics Misleading Evidence and Evidence-Led Policy Lawrence W. Sherman,2003-09 Research evidence can and should have an important role in shaping public policy Just as much of the medical community has embraced the concept of evidence based medicine increasing numbers of social scientists and government agencies are calling for an evidence based approach to determine which social programs work and which ones don t It is an irony not lost on the social scientists writing for the September volume of The Annals that the first use of experimental methods in medicine to test the effects of Streptomycin on tuberculosis in the late 1940s was actually conducted by an economist But while more than one million clinical trials in medicine have been conducted since that time only about 10 000 have been conducted to evaluate whether social programs achieve their intended effects Authors of the September volume argue that this level of investment in the gold standard of research designs is insufficient for a wide range of reasons Randomized controlled trials for example are far better at controlling selection biases and chance effects than are other observational methods while econometric and statistical techniques that seek to correct for bias fall short of their promise The volume dramatically demonstrates that alternative methods generate different and often substantially wrong estimates of program effects Some research based on nonexperimental research designs actually mislead policy makers and practitioners into supporting programs that don t work

while ignoring others that do Authors of this volume also directly address critiques of experimental designs which range from questions about their practicality to their ethics Some of these arguments are well taken but addressable The authors however reject other arguments against controlled tests as unfounded and damaging to social science Policymakers will find these articles invaluable in better understanding how alternative research methods can mislead as much as enlighten Students and researchers will be confronted with powerful arguments that question the use of nonexperimental techniques to estimate program effects This volume throws the gauntlet down We challenge you to pick it up [Promoting Young People's Sexual Health](#) Roger Ingham, Peter Aggleton, 2006 Key discussions and valuable contributions on different aspects of sexual and reproductive health among young people are brought together here in one single volume *Preventing HIV/AIDS in Young People* World Health Organization, UNAIDS Inter-Agency Task Team on Young People, 2006 Young people are particularly vulnerable to HIV 15-24 year olds account for 50% of new cases Five to six thousand youths become infected every day most of them in developing countries The UN General Assembly Special Session on AIDS in June 2001 set a number of goals to drive efforts to reduce prevalence in this age group This report provides evidence based recommendations for policy makers program managers and researchers to guide efforts towards meeting the UN goals on HIV/AIDS and young people These goals aim to decrease prevalence and vulnerability and to increase access to information skills and services This report provides a systematic review the effectiveness of interventions provided through schools health services mass media communities and to young people who are most vulnerable to HIV infection **Journal of the National Cancer Institute**, 2004 Summaries of papers contained in the journal accompany each issue 19 **Bulletin of the Royal Institute for Inter-Faith Studies**, 2004 **BMJ**, 2008 *Effective Interventions for Child Abuse and Neglect* Geraldine Macdonald, 2001-02 Why are some children abused or neglected What can be done to protect and help them A key element of informed decision making is knowing what sort of problems are amenable to what sort of intervention in what circumstances and with what degree of certainty *Effective Interventions for Child Abuse and Neglect* provides a thorough and detailed review of the available research and makes suggestions as to how this evidence can be incorporated into professional child protection work Geraldine Macdonald first considers the range of evaluative tools available with illustrations from existing research studies and reviews and appraises their respective merits and limitations She then describes the interplay of a range of causal factors in abuse and neglect and considers different types of maltreatment and their potential consequences Evidence for effective preventative and therapeutic measures are considered next followed by a final section on accurate assessment and the use of formal tools in risk management **International Family Planning Perspectives**, 2004 **The British National Bibliography** Arthur James Wells, 2003 [American Book Publishing Record](#), 2003 [Sociological Abstracts](#) Leo P.
