The Efficiency of Theorem Proving Strategies David A. Plaisted, Yunshan Zhu, 2014-01-15 The Efficiency of Theorem Proving Strategies David A. Plaisted, Yunshan Zhu, 2013-11-11 This is the second and slightly revised edition of this book A few errors have been fixed and some references to related work have been added I thank the readers for their comments on the first edition We analyze the search efficiency of a number of common refutational theorem proving strategies on propositional and near propositional problems Search efficiency is concerned with the total number of proofs and partial proofs generated rather than with the sizes of the proofs We show that most common strategies produce search spaces of exponential size even on simple sets of clauses or else are not sensitive to the goal However clause linking which uses a reduction to propositional calculus has behavior that is more favorable in some respects a property that it shares with methods that cache subgoals A strategy which is of interest for term rewriting based theorem proving is the A ordering strategy and we discuss it in some detail We show some advantages of A ordering over other strategies which may help to explain its efficiency in practice We also point out some of its combinatorial inefficiencies especially in relation to goal sensitivity and irrelevant clauses In addition SLD resolution which is of importance for Prolog implementation has combinatorial inefficiencies this may suggest basing Prolog implementations on a different theorem proving strategy We also develop techniques for studying the asymptotic complexity of first order theorem provers This permits an analytic comparison of the worst case performances of various theorem proving methods **The search efficiency of theorem proving strategies** David A. Satisfiability Problem Dingzhu Du, Jun Gu, Panos M. Pardalos, 1997-01-01 The satisfiability SAT problem is central in mathematical logic computing theory and many industrial applications There has been a strong relationship between the theory the algorithms and the applications of the SAT problem This book aims to bring together work by the best theorists algorithmists and practitioners working on the sat problem and on industrial applications as well as to enhance the interaction between the three research groups The book features the applications of theoretical algorithmic results to practical problems and presents practical examples for theoretical algorithmic study Major topics covered in the book include practical and industrial SAT problems and benchmarks significant case studies and applications of the SAT problem and SAT algorithms new algorithms and improved techniques for satisfiability testing specific data structures and implementation details of the SAT algorithms and the theoretical study of the SAT problem and SAT algorithms

Resolution Proof Systems Z. Stachniak, 2012-12-06 Resolution Proof Systems An Algebraic Theory presents a new algebraic framework for the design and analysis of resolution based automated reasoning systems for a range of non classical logics It develops an algebraic theory of resolution proof systems focusing on the problems of proof theory representation and efficiency of the deductive process A new class of logical calculi the class of resolution logics emerges as a second theme of the book The logical and computational aspects of the relationship between resolution logics and resolution proof systems is explored in the context of monotonic as well as nonmonotonic reasoning This book is aimed primarily at researchers and graduate students in artificial intelligence symbolic and computational logic The material is suitable as a reference book for researchers and as a text book for graduate courses on the theoretical aspects of automated reasoning and computational logic

Logic at Work Helena Rasiowa, 1999 The book is divided into eight parts whose topics are chosen to emphasize application areas of logic in particular those related to soft computing Each part demonstrates possible application of logical methods to problems in the respective areas The book presents a broad variety of fields and issues in which logic provides conceptual technical or methodological tool In particular important topics in foundations of soft computing including fuzzy logic multiple valued logic theories of inconsistency and ambiguity theory of rough sets theories of incomplete information are studied The book may be seen as a resource to which readers can turn for research horizons and ideas on how logical models and methods can be developed and applied It is a source for anyone who needs broad perspective on a role of applied logic and a better
