Eight Papers Translated From The Russian:

Eight Papers Translated from the Russian Ben Silver, 1989 *Translations. Ser. 2, 159. Proceedings of the St. Petersburg Mathematical Society.* - 2 United States. Office of Naval Research, 1994-11-22 This book contains papers on a wide range of topics including diophantine equations algebraic number theory ring theory theory of functions of a real variable partial differential equations approximation of functions differential geometry computing theory and statistical mechanics The last three papers present historical perspectives on mathematics in St Petersburg *Some questions of differential geometry in the large* E. V. Shikin, 1996-07-16 This collection contains articles that present recent results by geometers in Russia and the Ukraine Papers in the collection deal with various questions related to the structure symmetries and embeddings of submanifolds in Euclidean and pseudo Euclidian spaces This collection offers a review of the challenges facing specialists in geometry in the large and features current research in the field **Proceedings of the St. Petersburg Mathematical Society, Volume I** O. A. Ladyzhenskaya Anatoli Moiseevich Vershik, 1993-03-22 This is the inaugural volume of a new book series published under the auspices of the St Petersburg Mathematical Society The book contains contributions by some of the leading mathematicians in St Petersburg Ranging over a wide array of topics these papers testify to the diverse interests and productive mathematical life of the St Petersburg Mathematical Society *Singularity Theory and Some Problems of Functional Analysis* Semen Grigor'evich Gindikin, 1992 The emergence of singularity theory marks the return of mathematics to the study of the simplest analytical objects functions graphs curves surfaces The modern singularity theory for smooth mappings which is currently undergoing intensive developments can be thought of as a crossroad where the most abstract topics such as algebraic and differential geometry and topology complex analysis invariant theory and Lie group theory meet the most applied topics such as dynamical systems mathematical physics geometrical optics mathematical economics and control theory The papers in this volume include reviews of established areas as well as presentations of recent results in singularity theory The authors have paid special attention to examples and discussion of results rather than burying the ideas in formalism notation and technical details The aim is to introduce all mathematicians as well as physicists engineers and other consumers of singularity theory to the world of ideas and methods in this burgeoning area **Topics in Statistical and Theoretical Physics** R. L. Dobrushin, 1996 **Second Siberian Winter School "Algebra and Analysis"** Igor' Aleksandrovich Aleksandrov, Leonid A. Bokut, Leonid Arkad'evich Bokut', Yurii G. Reshetnyak, 1992 This book the second in the series of proceedings of Soviet Regional Conferences contains papers presented at the Second Siberian Winter School Algebra and Analysis held at Tomsk State University in 1989 The papers touch on a variety of topics including Lie algebras and Lie groups sheaves and automorphic forms **Ordered Sets and Lattices II**, This indispensable reference source contains a wealth of information on lattice theory The book presents a survey of virtually everything published in the fields of partially ordered sets semilattices lattices and Boolean algebras that

was reviewed in Referativnyi Zhurnal Matematika from mid 1982 to the end of 1985 A continuation of a previous volume the English translation of which was published by the AMS in 1989 as volume 141 in Translations Series 2 this comprehensive work contains more than 2200 references Many of the papers covered here were originally published in virtually inaccessible places The compilation of the volume was directed by Milan Kolibiar of Comenius University at Bratislava and Lev A Skorniyakov of Moscow University Of interest to mathematicians as well as to philosophers and computer scientists in certain areas this unique compendium is a must for any mathematical library

Problems of Reducing the Exhaustive Search Vladik Kreinovich,1997 This collection contains translations of papers on propositional satisfiability and related logical problems which appeared in roblemy Sokrashcheniya Perebora published in Russian in 1987 by the Scientific Council Cybernetics of the USSR Academy of Sciences The problems form the nucleus of this intensively developing area This translation is dedicated to the memory of two remarkable Russian mathematicians Sergei Maslov and his wife Nina Maslova Maslov is known as the originator of the universe method in automated deduction which was discovered at the same time as the resolution method of J A Robison and has approximately the same range of applications In 1981 Maslov proposed an iterative algorithm for propositional satisfiability based on some general ideas of search described in detail in his posthumously published book *Theory of Deductive Systems and Its Applications* 1986 English 1987 This collection contains translations of papers on propositional satisfiability and related logical problems The papers related to Maslov s iterative method of search reduction play a significant role
