Glacial Geomorphology and Pleistocene History of Central British Columbia H. W. Tipper, Kenneth L. Currie, 1971

Engineering Geology and Geomorphology of Glaciated and Periglaciated Terrains J.S. Griffiths, C.J. Martin, 2017-10-18

The Engineering Group of the Geological Society Working Party brought together experts in glacial and periglacial geomorphology Quaternary history engineering geology and geotechnical engineering to establish best practice when working in former glaciated and periglaciated environments The Working Party addressed outdated terminology and reviewed the latest academic research to provide an up to date understanding of glaciated and periglaciated terrains This transformative state of the art volume is the outcome of five years of deliberation and synthesis by the Working Party This is an essential reference text for practitioners students and academics working in these challenging ground conditions The narrative style and a comprehensive glossary and photo catalogue of active and relict sediments structures and landforms make this material relevant and accessible to a wide readership

Quaternary Glaciations - Extent and Chronology J. Ehlers, P.L. Gibbard, Philip D. Hughes, 2011-08-17 The book presents an up to date detailed overview of the Quaternary glaciations all over the world not only with regard to stratigraphy but also with regard to major glacial landforms and the extent of the respective ice sheets The locations of key sites are included The information is presented in digital uniformly prepared maps which can be used in a Geographical Information System GIS such as ArcView or ArcGIS The accompanying text supplies the information on how the data were obtained geomorphology geological mapping air photograph evaluation satellite imagery how the features were dated 14C TL relative stratigraphy and how reliable they are supposed to be All references to the underlying basic publications are included Where controversial interpretations are possible e.g. in Siberia or Tibet this is pointed out As a result the information on Quaternary glaciations worldwide will be much improved and supplied in a uniform digital format The information on the glacial limits is compiled in digital form by the coordinators of the project and is available for download at <http://booksite.elsevier.com/9780444534477> Completely updated detailed coverage of worldwide Quaternary glaciations Information in digital uniformly prepared maps which can be used in a GIS such as ArcView or ArcGis Step by step guideline how to open and use ArcGis files Possibility to convert the shapefiles into GoogleEarth kmz files Availability of chronological controls

History of Geomorphology and Quaternary Geology R. H. Landscapes and Landforms of Western

Canada Olav Slaymaker,2016-12-01 This is the only book to focus on the geomorphological landscapes of Canada West It outlines the little appreciated diversity of Canada s landscapes and the nature of the geomorphological landscape which deserves wider publicity Three of the most important geomorphological facts related to Canada are that 90% of its total area emerged from ice sheet cover relatively recently from a geological perspective permafrost underlies 50% of its landmass and the country enjoys the benefits of having three oceans as its borders the Arctic Pacific and Atlantic oceans Canada West is a land of extreme contrasts from the rugged Cordillera to the wide open spaces of the Prairies from the humid west coast forests to the semi desert in the interior of British Columbia and from the vast Mackenzie river system of the to small steep cascading streams on Vancouver Island The thickest Canadian permafrost is found in the Yukon and extensive areas of the Cordillera are underlain by sporadic permafrost side by side with the never glaciated plateaus of the Yukon One of the curiosities of Canada West is the presence of volcanic landforms extruded through the ice cover of the late Pleistocene and Holocene epochs which have also left a strong imprint on the landscape The Mackenzie and Fraser deltas provide the contrast of large river deltas debouching respectively into the Arctic and Pacific oceans **Glacial Geomorphology**

renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next *Glacial and Periglacial Geomorphology: Glacial geomorphology* Clifford Embleton, Cuchlaine A. M. King, 1975 **Zeitschrift für Geomorphologie**, 1928 **Glaciers of Georgia** Levan Tielidze, 2017-01-20 This book gives the most detailed and comprehensive insights into the morphology, morphometry and dynamics of glaciers in the Georgian Caucasus region up to date. It examines the variability of valley glaciers after the Little Ice Age maximum and identifies glacial dynamics during historical periods. The reconstruction of glaciation in the Late Pleistocene and Holocene was conducted based on long-lasting detailed glacial geomorphological observations by the author. It further analyses moraine structures, river terraces, geodynamics of the relief and snow and firn line locations derived from field surveys in most glacier basins in the southern and northern slopes of the Georgian Caucasus. A whole set of methodological approaches was applied, including remote sensing and GIS, glacio-geomorphological, cartographical, aerial image processing and petrographic methods, unveiling accurate information about glaciers difficult to access, e.g. in the Abkhazeti and Tskhinvali regions. The book provides a full database of Georgia's modern glaciation and displays a set of compiled maps of the distribution of the Late Pleistocene glaciation of the Georgian Caucasus. *European Glacial Landscapes* David Palacios, Philip D. Hughes, Jose M. Garcia-Ruiz, Nuria de Andrés, 2022-09-16 *European Glacial Landscapes* Last Deglaciation brings together relevant experts on the history of glaciers and their impact on the landscape of the main European regions. Soon after the Last Glacial Maximum, a rapid process of the glacial retreat began throughout Europe. This was interrupted several times by abrupt climate cooling, which caused rapid, although moderate, re-advance of the glaciers until the beginning of the Holocene, when the climate became relatively stable and warm. These successive glacial advances and retreats during the Last Deglaciation have shaped much of the European landscape, reflecting abrupt climatic fluctuations. As our knowledge of abrupt climate changes since the Last Glacial Maximum progresses, new uncertainties arise. These are critical for understanding how climate changes disseminate through Europe, such as the lag between climate changes and the expansion or contraction of glaciers, as well as the role of the large continental ice sheets on the European climate. All these contributions are included in the book, which is an invaluable resource for geographers, geologists, environmental scientists, paleoclimatologists, as well as researchers in physics and earth sciences. Provides a synthesis that highlights the main similarities or differences through both space and time during the Last Deglaciation of Europe. Features research from experts in quaternary geomorphology, palaeoclimatology, palaeoceanography and palaeoglaciology on the Last Deglaciation in Europe during Termination 1 and the important Late Pleistocene-Holocene transition. Includes detailed colour figures and maps providing a comprehensive overview of the glacial landscapes of Europe during the last deglaciation. **Catalog of the United States Geological Survey Library** U.S. Geological Survey Library, 1974 **Late Quaternary Geology and Geochronology of British Columbia** John J.
