Evaluation of Health Promotion and Disease Prevention Programs Richard Windsor,2015-03-25 Evaluation of Health Promotion and Disease Prevention Programs offers conceptual and methodological frameworks for the six phases of health program evaluation introduction to evaluation models of evaluation planning efficacy and effectiveness evaluation measurement and analysis evaluation process and qualitative evaluation cost analysis and basic economic evaluation By presenting these concepts through case studies this text offers an innovative and didactic model for measuring health impact and health outcomes then extending these measurements to establish an evidence base for future practice This central competency in health promotion will be of use to graduate and post graduate students in public and population health programs plus health program practitioners working at the intervention forefront *The Practice of Health Program Evaluation* David Grembowski,2015-09-16 Reflecting the latest developments in the field The Practice of Health Program Evaluation Second Edition provides readers with effective methods for evaluating health programs policies and health care systems offering expert guidance for collaborating with stakeholders involved in the process Author David Grembowski explores evaluation as a three act play Act I shows evaluators how to work with decision makers and other groups to identify the questions they want answered Act II covers selecting appropriate evaluation designs and methods to answer the questions and reveal insights about the program s impacts cost effectiveness and implementation and Act III discusses making use of the findings Packed with relevant examples and detailed explanations the book offers a step by step approach that fully prepares readers to apply research methods in the practice of health program evaluation **Federal Program Evaluations** ,1981 Contains an inventory of evaluation reports produced by and for selected Federal agencies including GAO evaluation reports that relate to the programs of those agencies Improving the Use of Program Evaluation for Maximum Health Impact ,2012 Evaluation is a systematic method for collecting analyzing and using data to examine the effectiveness and efficiency of programs and as importantly to contribute to continuous program improvement see Appendix A for key definitions CDC has a deep and long standing commitment to the use of data for decision making as well as the responsibility to describe the outcomes achieved with its public health dollars When programs conduct strong practical evaluations on a routine basis the findings can both meet accountability mandates as well as improve program effectiveness In an effort to bring greater consistency to the use of evaluation for these purposes evaluation experts around the Agency developed a set

of recommendations to inform evaluation planning and implementation The goal is to increase the use of evaluation data for continuous program improvement Agency wide These are recommendations and not mandates because our programs vary so much in purpose funding and history It is expected that the leadership of Centers Divisions and large programs will seriously and systematically consider which of these guidelines and recommendations are most important to improve evaluation capacity and the quality of program evaluations in their own organizations Why are these guidelines and recommendations needed Although program evaluation has always been a respected component of public health practice the ability to conduct meaningful program evaluations has been constrained by wide differences in expertise resources of programs and commitment to evaluation Unfortunately as the accountability environment has intensified at all levels of government public health programs often find themselves unable to make a persuasive case for the efficacy and effectiveness of their programs Likewise in an environment of scarce resources we need more and better information about which interventions and approaches of the many options open to us are best suited to the problem Strong program evaluation can help us identify our best investments as well as determine how to establish and sustain them as optimal practice While the emphasis is on CDC practice most of these recommendations when implemented will improve the ways in which partners grantees and community based organizations evaluate and improve their program efforts as well
