Estimate Costs

- Estimate Costs is the process of developing an approximation of the monetary resources needed to complete project activities.

- The key benefit of this process is that it determines the amount of cost required to complete project work.

- Cost estimates should be reviewed and refined during the course of the project to reflect additional detail as it becomes available and assumptions are tested.
For example, a project in the initiation phase may have a rough order of magnitude (ROM) estimate in the range of 25% to +75%. Later in the project, as more information is known, definitive estimates could narrow the range of accuracy to -5% to +10%.

- The techniques for estimating the cost involved in performing each of the project activities are the same as estimating the time required.
