Global Climate Current Research And Uncertainties In The Climate System:

Global Climate Xavier Rodo, Francisco Comin, 2013-03-09 Uncertainty for Everyone The one thing that is certain about the world is that the world is uncertain I have here the question that apart of the matter living matter has to resolve in each and every one of its moments of existence The environment of a living being is apart of the living being where it turns out the rest of the living beings live This is the drama of life on earth Every living individual debates with his environment exchanging matter energy and information in the hope of staying alive the same as all living beings who share that same environment The adventure of a living being of all living beings is to maintain reasonable independence in face of the fluctuations of uncertainty within the environment The range of restrictions and mutual relationships is colossal How is the transcendental pretension of staying alive regulated There is an equation imposed by the laws of thermodynamics and the mathematical theory of information about the interaction of a living being with his environment which we could state like this The complexity of a living individual plus his capacity for anticipation in respect to his environment is identical to the uncertainty of the environment plus the capacity of that living being to change the environment **Science Concerning**
