First Workshop On Grand Unification:

First Workshop on Grand Unification FRAMPTON,2012-12-06 This workshop held at the New England Center provided a timely opportunity for over 100 participants to gather in a unique environment and discuss the present status of the unification of strong and electroweak forces One reason for the timeliness was perhaps that experiments of the seventies had already lent confirmation to the separate theories of strong and of electroweak forces so that for the eighties it now seems especially compelling to attempt the grand unification of these two forces Also the planned experiments to search for proton decay and the new experiments which are suggestive though not yet conclusive of non zero neutrino rest masses add further stimulus to the theory Thus the workshop provided an ideal forum for exchange of ideas amongst active physicists The presentations at the workshop covered the present status of both theory and experiment with a strong interplay Also there were presentations from the discipline of astrophysics which is becoming very intertwined with that of high energy physics especially when in the latter one is addressing energies and temperatures that were extant only in the first nanosecond of the universe On experiment we heard a comprehensive coverage of the four United States proton decay experiments The Brookhaven Irvine Michigan experiment in the Morton Salt Mine at Fairport Harbor Ohio was discussed by LARRY SULAK while DAVID WINN talked on the Harvard Purdue Wisconsin effort in the Silver King Mine Utah MARVIN MARSHAK and RICHARD STEINBERG described respectively the Soudan Mine Minnesot and the Homestake Mine South Dakot experiments

First Workshop on Grand Unification 3Island Press,1980-01-01 Launching Of La Belle Epoque Of High Energy Physics And Cosmology, The: A Festschrift For Paul Frampton In His 60th Year And Memorial Tributes To Behram Kursunoglu (1922-2003) - Procs Of The 32nd Coral Gables Conf Thomas L Curtright,Arnold Perlmutter,Stephan Mintz,2005-01-25 Recent experimental results with direct bearing on theories of cosmological dark matter energy as well as continuing work on neutrino masses and mixing have invigorated both particle physics and cosmology and should continue to do so well into the 21st century thereby launching a beautiful new epoch for these fields The expert contributions from this conference took stock of these developments This volume contains papers by over 40 physicists that summarize and interpret the newest findings and suggest future avenues to be explored A number of new theoretical ideas are also presented dealing with progress in understanding the dynamics and symmetries of strings and branes renormalization in quantum field theory possible Lorentz violation effects and related problems Ongoing and next generation gravitational and neutrino experiments are described and the issues of unification are dealt with in the context of and beyond the standard model Together the contributions provide a useful blend of experimental and theoretical physics from many prominent physicists including three Nobel Laureates The volume also contains information of an historical nature concerning the contributions to physics by Paul Frampton on the occasion of his 60th year and summarizing the career of Behram Kursunoglu 1922 2003

The Edge of Knowledge Lawrence M. Krauss, 2023-05-09 Lawrence Krauss explores the greatest unanswered questions at the forefront of science today and likely for the coming century and beyond Internationally known theoretical physicist and bestselling author Lawrence Krauss explores science's greatest unanswered questions Three of the most important words in science are I don't know Not knowing implies a Universe of opportunities the possibility of discovery and surprise Our understanding of science has advanced immeasurably over the last five hundred years yet many fundamental mysteries of existence persist How did our Universe begin How big is the Universe Is time travel possible What's at the center of a black hole How did life on Earth arise Are we alone What is consciousness and can we create it These mysteries define the scientific forefront the threshold of the unknown To explore that threshold is to gain a deeper understanding of just how far science has progressed Covering time space matter life and consciousness Krauss introduces readers to topics that will shape the state of science for the next century providing us all passport to our own journeys of exploration and discovery

LEVEILLE, SULAK, UNGER, 2012-12-06 Recently there has been rapid progress towards understanding the separate theories of the strong weak and electromagnetic interactions within the framework of the standard SU 3 x SU 2 x U 1 model The purpose of the Second Workshop on Grand Unification was to discuss the physics beyond the standard model and the major topic was grand unified theories which unify the strong weak and electromagnetic sectors Grand unified theories are

presently being used to calculate experimentally accessible quantities such as the proton lifetime and nucleon decay branching ratios. Meanwhile experiments are currently being performed and new dedicated experiments mounted to measure these quantities. Reports on these experimental and theoretical activities occupied much of the workshop. Furthermore since grand unified theories allow one to extrapolate the behavior of the universe back to the first instants after the big bang their cosmological implications and the constraints on these theories from cosmology were of great interest at the workshop. The conference opened with a keynote address by S L Glashow in which he discussed among other topics baryon minus lepton number conservation, neutrino masses and a neutrino free universe. To maximize the interplay between theorists and experimentalists theoretical and experimental talks were interleaved. An experimental highlight of the workshop was the presentation by S Miyake of three candidate events for proton decay.
