## **Fish Processing Technology:**

*Fish Processing Technology* George M. Hall, 2012-12-06 As with the first edition this book includes chapters on established fish processes and new processes and allied issues The first five chapters cover fish biochemistry affecting processing curing surimi and fish mince chilling and freezing and canning These established processes can still show innovations and improved theory although their mature status precludes major leaps in knowledge and technology The four chapters concerned with new areas relevant to fish processing are directed at the increasing globalisation of the fish processing industry and the demands from legislation and the consumer for better quality safer products One chapter reviews the methods available to identify fish species in raw and processed products The increased demand for fish products and the reduced catch of commercially important species has led to adulteration or substitution of these species with cheaper species The ability to detect these practices has been based on some elegant analytical techniques in electrophoresis

*Seafood Processing* Ioannis S. Bozaris, 2014-01-14 Part of the new IFST Advances in Food Science Series Seafood Processing Technology Quality and Safety covers the whole range of current processes which are applied to seafood as well as quality and safety aspects The first part of the book Processing Technologies covers primary processing heating chilling freezing irradiation traditional preservation methods salting drying smoking fermentation etc frozen surimi and packaging The subjects of waste management and sustainability issues of fish processing are also covered In the second part Quality and Safety Issues quality and safety analysis fish and seafood authenticity and risk assessment are included Provided by publisher

Nicolau, Peter Raspor, 2017-10-30 The high market demand based on consumers trust in fish as a healthy and nutritious food resource made fish processing a very dynamic industry spurring many innovations in processing and packaging methods Trends in Fish Processing Technologies not only reflects what is currently new in fish processing but also points out where things are heading in this area This book provides an overview of the modern technologies employed by the industry It details the advances in fish processing including high pressure processing HPP pulsed electric field PEF treatment and minimally heat processing combined with microwave MW and radio frequency RF It provides references to food safety management systems and food safety quality indicators for processed fish in order to achieve an adequate level of protection Quality aspects and molecular methods for the assessment of fish and fish products integrity are introduced Fish products reformulation trends based on sustainability principles that tackles the reduction of salt content and the use of natural antimicrobials are presented Innovative packaging solutions for fish products are explored detailing intelligent packaging with freshness and

time temperature indicators applications of modified packaging atmosphere antimicrobial bio nanocomposite packaging materials and biodegradable edible films used as primary fish packaging In addition to covering the current advancements in fish processing the book discusses fraud adulteration fair trade practices traceability and the need for added value clean and sustainable processing in the fish chain **FISH AND KRILL PROTEIN: Processing Technology** Taneko

Suzuki,2012-02-16 In her book Dr Taneko Suzuki shows us how a modern fish processing industry using complex technology has evolved from the traditional methods of fish preparation long in use in Japan With only a small proportion of arable land for growing food the Japanese have always looked to the sea and fortunately have been blessed with a rich and varied aquatic fauna Over the ages the Japanese have learnt not only how to make maximum nutritional use of their marine resources but also how to present them as attractive food items As a result the visual impact and organoleptic properties of the vast array of fishery products make Japanese cuisine one of the most exciting in the world In addition the Japanese have developed a strong tradition of quality whether for the small quantities of fish used in the past to add interest to a monotonous rice diet or for the larger quantities of raw and cooked products required by today's affluent society The growth of the Japanese fishing industry paralleled the phenomenal industrial developments of the post war years It continued until Japanese fleets were in action all over the world trying to satisfy the demands of a booming economy for high quality fishery products All the time technology was being developed to make use of unusual species as raw material for traditional products Fish Processing Technology T.
