Malter,1914 **Geological Disasters in Deep Engineering Mechanism, Warning and Risk mitigation** Guang-Liang Feng,Fengqiang Gong,Chi Zhang,Shibing Huang,2023-06-15 With the increasing demand for infrastructure construction as the global economy progresses the need for exploration and utilization of deep underground space becomes more crucial Various deep underground projects are planned are under construction and have been built to encounter great construction challenges due to the complex geo environment such as strong tectonic movement fragile geo environment and complex thermo hydro mechanical chemical conditions These deep engineering projects could be endangered by different kinds of geological disasters such as intense rockburst large deformation strong water inrush and large scale collapse which might result in massive loss of life and economic damage during the construction of deep underground projects It is necessary to take proactive measures to ensure that the development of deep engineering projects is risk informed and sustainable Efforts are being called for strengthening science and technology innovation and cooperation in geological disaster mitigation and sustainable development during the construction of deep engineering projects It is paramount to use new technologies and international cooperation to jointly tackle the geological disasters risks and achieve sustainable development To mitigate the risk of geological disaster in deep engineering under the complicate geo environment the mechanism of the formation and evolution of geological disasters in deep engineering needs to be understood The testing monitoring simulation risk assessment and early warning methods for geological disaster in deep engineering are also needed urgently New theories methods and techniques related to the mechanism warning and risk mitigation of geological disasters in deep engineering will be extremely helpful for the construction safety of deep engineering **The Encyclopædia Britannica** Thomas Spencer Baynes,1891 *Origin and Evolution of Sedimentary Basins and Their Energy and Mineral Resources* Raymond A. Price,1991-01-08 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 48 The International Lithosphere Program was launched in 1981 as a ten year project of interdisciplinary research in the solid earth sciences It is a natural outgrowth of the Geodynamics Program of the 1970 s and of its predecessor the Upper Mantle Project The Program Dynamics and Evolution of the Lithosphere The Hazards is concerned primarily with the current state origin and development of the lithosphere with special attention to the continents and their margins One special goal of the program is the strengthening of interactions between basic research and the applications of geology geophysics geochemistry and geodesy to mineral and energy resource exploration and development to the mitigation of geological hazards and to protection of the environment another special goal is the strengthening of the earth sciences and their effective application in developing countries The origin and evolution of sedimentary basins is an obvious focus of the International Lithosphere Program because it is

fundamentally a problem in the dynamics and evolution of the lithosphere and moreover it provides special opportunities for strengthening the interactions between basic research and the applications of geology geophysics geochemistry and geodesy to mineral and energy exploration and development Accordingly at both the XXVIIth International Geological Congress in Moscow in 1984 and at the XIXth General Assembly of the International Union of Geodesy and Geophysics in Vancouver in 1987 the International Lithosphere Program convened special symposia on the subject of the origin and evolution of sedimentary basins and their mineral and energy resources This special volume presents some of the principal results of those symposia
