glossary with over 4500 definitions of energy terms covering all areas of energy from the traditional energy industries such as coal gas electric and nuclear to renewable fuels and new technologies **Nevada Solar Energy Handbook** W. C. Miller, University of Nevada. Desert Research Institute, 1979 **The Global Energy Handbook** John R. Fortun, 2008-08 This handbook describes world energy from initial production to its end use consumption It is unique in that it does this using a clear and consistent set of energy units the BTU In most articles energy terms such as megawatts barrels of oil and gallons of gasoline are so intermixed the reader cannot see what s happening at the global level The handbook was compiled mainly from Internet and current media sources It is organized and presented in a way that can easily be followed The handbook is also unique in that it does not address the usual subjects of energy technology global warming or ways to save energy the literature being rife with this sort of information Upon gaining a feeling for the global energy flow process the reader will begin to question the conventional wisdom on energy conservation efficiency and the alternative energy sources that routinely appears in the media Numerous What If examples are given to illustrate why the conventional wisdom has been unable to reduce or even slow down global energy consumption You will be surprised and dismayed by what these examples tell us about the difficulty of saving energy at the global level They will make the meaning of two key phrases used throughout the handbook to become clear Energy does not hold still while we try to fix it and We have been looking at energy through the wrong end of the telescope **The Renewable Energy Handbook** Fine, Richard, Energy Probe, 1976
