

Importance of Engineering design

- *Decisions made in the design process cost very little in terms of the overall product cost but have a major effect on the cost of the product.*

- *You cannot compensate in manufacturing for defects introduced in the design phase.*

(The design must be carried out so that the product can be made without defect at a competitive cost.)

- *The design process should be conducted so as to develop quality, cost-competitive products in the shortest time possible.*

(the longer a product is available for sale the more sales and profits there will be.)

Engineering Design Decisions:

Decision-Based Design Wei Chen, Christopher Hoyle, Henk Jan Wassenaar, 2012-08-22 Building upon the fundamental principles of decision theory Decision Based Design Integrating Consumer Preferences into Engineering Design presents an analytical approach to enterprise driven Decision Based Design DBD as a rigorous framework for decision making in engineering design Once the related fundamentals of decision theory economic analysis and econometrics modelling are established the remaining chapters describe the entire process the associated analytical techniques and the design case studies for integrating consumer preference modeling into the enterprise driven DBD framework Methods for identifying key attributes optimal design of human appraisal experiments data collection data analysis and demand model estimation are presented and illustrated using engineering design case studies The scope of the chapters also provides A rigorous framework of integrating the interests from both producer and consumers in engineering design Analytical techniques of consumer choice modelling to forecast the impact of engineering decisions Methods for synthesizing business and engineering models in multidisciplinary design environments and Examples of effective application of Decision Based Design supported by case studies No matter whether you are an engineer facing decisions in consumer related product design an instructor or student of engineering design or a researcher exploring the role of decision making and consumer choice modelling in design Decision Based Design Integrating Consumer Preferences into Engineering Design provides a reliable reference over a range of key topics

A Pilot Study of Engineering Design-decision Methods in Practice Aaron Nichols,2012 Numerous engineering design decision methods have been developed to assist groups of engineers in making choices within a design problem However while there are a variety of methods to choose from there is no empirical data that exhibits which decision method is best for specific phases of the design process or that designers are willing to adopt particular decision methods Due to this lack of empirical data industry may not use certain engineering design methods since they do not have the resources or time to investigate which method would work best for them This work presents the development of a framework to examine various engineering design decision methods in practice The framework is used in a pilot study with undergraduate engineering students which compares usage of two formal design decision tools Pugh s Controlled Convergence PuCC and the Group Hypothetical Equivalents and Inequivalents Method G HEIM to the results of an informal method a group decision that is made without a formalized decision method Results of the pilot study include documenting the emergence of decision traps within each group assessing student perceptions about using formalized design decision methods through interviews and surveys critical to understanding potential barriers to adoption of formal methods and insight into where formal decision methods are most appropriate within a design process Finally a number of changes and additions to the framework and study protocol are identified for future work focused on repeating the study with more participants and potentially in industrial settings

Mathematical modeling is becoming a vital tool in engineering design These models have been used to provide decision support to designers of systems characterized by many design choices However for the design of complex systems these models become too large and cumbersome to be of significant value As a result research has progressed in the decomposition of the design problem A decision support system serving as a computer based aid for engineers designing weapon systems must integrate procedures dealing with designing for producibility and designing for supportability with those dealing with designing for performance cost and schedule ULCE Implementation Plan 1987 One of the characteristics of large weapon system development that causes difficulties in achieving this integration is the hierarchical nature of the design process Typically a system is designed in terms of subsystems which are required to meet certain specifications Problems begin to arise when these specifications cannot be met Consequently these design processes may be enhanced by a computer based system that supports the hierarchical nature of design This research examines the application of mathematical modeling and knowledge based system techniques to the development of decision support systems to support engineering design

DETC2005 ,2005 **Multiple Criteria Decision Support in Engineering Design** Pratyush Sen,Jian-Bo Yang,2012-12-06 Multiple Criteria Decision Support in Engineering Design examines some of the underlying issues and related modelling strategies with a view to exploring the rich potential of a generalised multiple criteria approach to design decision making The arguments are supported by numerical examples It can be argued that within the classic monocriterion paradigm the optimal solution is inarguably identified once the feasible alternatives are established and an objective function agreed on It is only when conflict resolution is involved that decision making truly becomes important and many design situations exist where stated functional requirements may be in actual or potential conflict The most preferred solution under such circumstances depends on the designer s or decision maker s priorities so that the chosen solution is based on a combination of technical possibilities and designer preferences This book addresses the key concepts in multiple criteria decision making and provides valuable insight into how such problems arise and can be solved in the area of decision making in general and in the domain of engineering design in particular *Electrical World* ,1927 [International Conference, Engineering Design](#) ,1989 **Global Engineering** Carlos Acosta,V.
