Sironen, 1922 *Paths and Rivers* Rosana Waterson, 2009-01-01 Fieldwork extending over a thirty year period provided materials for this book Paths and Rivers offers an unusually deep and broad picture of the Sa dan Toraja as a society in dynamic transition over the course of the past century The Toraja inhabit the mountainous highlands of South Sulawesi Indonesia and are well known for their dramatic architecture their unusual cliff burials and their flamboyant ceremonial life which places extraordinary economic demands on individuals and families The analysis is informed firstly by a comparative perspective which sets Toraja social structure in the context of the Austronesian world Secondly the author delves deeply into Toraja social memory to show how people think about the past She examines the usefulness of history and myth in the present as a source of identity a template for action or a resource by means of which to claim precedence The book gives a clear picture of the structure and ethos of the indigenous Toraja religion the Aluk To Dolo or Way of the Ancestors with its complex cycle of rituals The book concludes with an analysis of the ceremonial economy which draws upon both domestic subsistence production and the global market economy Paths and Rivers draws together a fascinating picture of one society's journey into modernity **Nonlinear Systems Analysis** M. Vidyasagar, 2002-01-01 When M Vidyasagar wrote the first edition of Nonlinear Systems Analysis most control theorists considered the subject of nonlinear systems a mystery Since then advances in the application of differential geometric methods to nonlinear analysis have matured to a stage where every control theorist needs to possess knowledge of the basic

techniques because virtually all physical systems are nonlinear in nature The second edition now republished in SIAM s Classics in Applied Mathematics series provides a rigorous mathematical analysis of the behavior of nonlinear control systems under a variety of situations It develops nonlinear generalizations of a large number of techniques and methods widely used in linear control theory The book contains three extensive chapters devoted to the key topics of Lyapunov stability input output stability and the treatment of differential geometric control theory Audience this text is designed for use at the graduate level in the area of nonlinear systems and as a resource for professional researchers and practitioners working in areas such as robotics spacecraft control motor control and power systems
