Heavy Artillery

WW2 FACT FILES

PETER CHAMBERLAIN and TERRY GANDER

For the purpose of this Fact File, heavy artillery has been defined as guns between the calibres of 106mm and 210mm. This category of artillery usually forms the main bulk of any army's striking force which is used for barrages and 'long range sniping'. During World War 2 this category included what was perhaps the most varied and assorted range of artillery pieces likely to be encountered, for it included such modern pieces as the British 5.5 inch howitzer (still in service in 1974) and such antiques as the French 155mm Schneider guns. Included are the British 4.5 inch howitzers, the long string of Russian 122 and 152mm pieces, the many French guns and howitzers in this calibre range, and many other artillery pieces from all the major combatants. As is usual in this series, many of the guns are illustrated with hitherto unpublished photographs.
