*The Medical Directory*, 1879      *Laser Optics of Condensed Matter* J. Birman, 2012-12-06 The Third Binational USA USSR Symposium titled *Laser Optics of Condensed Matter* was held in Leningrad 1 June 5 June 1987 This volume contains the full text of 64 papers presented at or prepared for the Symposium in both plenary and poster sessions This Symposium reestablished the very productive series of Light Scattering Binational Symposia which were initiated in Moscow in 1975 Unfortunately there was an eight year hiatus following the Second Symposium in New York 1979 This interval caused by serious chilling of the climate of USA USSR collaboration deprived the active scientists on both sides of the opportunity to meet and interact in the active format of a conference During this eight year interval there has been very rapid and intense development of scientific activity in the general area of laser optics phenomena The development of ultrafast laser sources has permitted rapid advances in time resolved spectroscopy and ultrafast processes the field of optical bistability and strong nonlinearity became a hot topic and intense work is now underway to clarify ideas of photon localization These new developments complement many advances in the study of low dimensional systems such as surfaces new work on phase transitions and novel studies of elementary excitations such as polariton excitons in localized environments such as quantum wells and heterojunctions      **The Sanitary Record**, 1874      **Catalogue** University of Pittsburgh, 1904      *Optical Phenomena in Semiconductor Structures of Reduced Dimensions* D.J. Lockwood, Aron Pinczuk, 2012-12-06 Remarkable advances in semiconductor growth and processing technologies continue to have a profound impact on condensed matter physics and to stimulate the invention of novel optoelectronic effects Intensive research on the behaviors of free carriers has been carried out in the two dimensional systems of semiconductor heterostructures and in the one and zero dimensional systems of nanostructures created by the state of the art fabrication methods These studies have uncovered unexpected quantum mechanical correlations that arise because of the combined effects of strong electron electron interactions and wave function confinement associated with reduced dimensionality The investigations of these phenomena are currently at the frontiers of condensed matter physics They include areas like the fractional quantum Hall effect the dynamics of electrons on an ultra short femtosecond time scale electron behavior in quantum wires and dots and studies of electron tunneling phenomena in ultra small semiconductor structures Optical techniques have made important contributions to these fields in recent years but there has been no coherent review of this work until now The book provides an overview of these recent developments that will be of interest to semiconductor materials scientists in university government and industrial laboratories      *Ultrafast Spectroscopy of Semiconductors and Semiconductor Nanostructures* Jagdeep Shah, 2013-11-21 The field of ultrafast spectroscopy of semiconductors and their nanostructures continues to be an active field of research Exciting new developments have taken place since the first edition of this book was completed in 1995 This revised edition includes a discussion of many of these recent developments in the field This is accomplished by adding a chapter on Recent

Developments at the end of the book This approach was selected to provide a discussion of results while they are still relatively recent Results published before the end of May 1998 were considered for inclusion in this book The objective of this revised edition remains the same as before to provide a cohesive discussion of the many diverse contributions of ultrafast spectroscopy to the field of semiconductors Extensive cross references are made to earlier chapters in order to accomplish this goal The chapter on Recent Developments begins with a brief discussion of new lasers new techniques of ultrafast spectroscopy and novel nanostructures This is followed by a section on Coherent Spectroscopy where some of the most interesting recent developments have taken place These include observation of quantum kinetic effects effects that require going beyond the mean field approach of the semiconductor Bloch equations coherent control of populations and current in semiconductors exciton continuum interactions and many diverse aspects of coherent spectroscopy including studies of microcavities Bragg structures quantum dots and quantum wires
