Soft Computing Luigi Fortuna, Gianguido Rizzotto, Mario Lavorgna, Giuseppe Nunnari, Maria Gabriella Xibilia, Riccardo Caponetto, 2012-12-06 In the last decade new artificial intelligence methods for the modelling and control of complex systems namely neural networks fuzzy logic and probabilistic reasoning have drawn the interest of researchers and engineers Recently the advantages achievable by using combinations of these methods which have independent origin and evolution have been pointed out generating a new paradigm which is now termed soft computing This new methodology subsumes the capabilities of neural networks for modelling non linear systems and for solving classification problems the power of fuzzy logic to represent

approximate or heuristic reasoning and the large capabilities of evolutionary computation for problem optimisation The book presents a clear understanding of a new type of computation system the cellular neural network CNN which has been successfully applied to the solution of many heavy computation problems mainly in the fields of image processing and complex partial differential equations CNNs computation based systems represent new opportunities for improving the soft computation toolbox The application of soft computing to complex systems and in particular to chaotic systems with the generation of chaotic dynamics by using CNN is also described These aspects are of particular interest owing to their growing interest for research and application purposes Specific topics covered in the text include fuzzy logic control and neural networks artificial neural networks and their application in the modelling and control of dynamical systems evolutionary optimisation algorithms complex dynamics and cellular neural networks applications in urban traffic noise monitoring robot control and rapid thermal process systems

Systems Structure and Control Petr Husek, 2008-08-01

The title of the book System Structure and Control encompasses broad field of theory and applications of many different control approaches applied on different classes of dynamic systems Output and state feedback control include among others robust control optimal control or intelligent control methods such as fuzzy or neural network approach dynamic systems are e g linear or nonlinear with or without time delay fixed or uncertain onedimensional or multidimensional The applications cover all branches of human activities including any kind of industry economics biology social sciences etc

New Approaches to Fuzzy Modeling and Control Michael Margaliot, Gideon Langholz, 2000 Fuzzy logic has found applications in an incredibly wide range of areas in the relatively wide range of areas in the relatively short time since its conception It was invented by Lotfi Zadeh a leading systems expert so it is perhaps not surprising that system theory is one of the areas in which fuzzy logic has made a profound impact Fuzzy logic combined with the paradigm of computing with words allows the use and manipulation of human knowledge and reasoning in the modeling and control of dynamical systems This monograph presents new approaches to the construction of fuzzy models and to the design of fuzzy controllers The emphasis is on developing methods that allow systematic design on the one hand and mathematical analysis of the resulting system on the other In particular the methods described allow rigorous analysis of the stability and robustness of the systems which are crucial issues in control theory The first theme of the book is a new approach to the system design and analysis of fuzzy controllers given linguistic information concerning the plant and the control objective The new approach fuzzy Lyapunov synthesis is a computing with words version of the well known classical Lyapunov synthesis method The second theme of the book is to show that fuzzy controllers are in fact solutions to a nonlinear optimal control problem The authors formulate a novel nonlinear optimal control problem consisting of a new state space model referred to as the hyperbolic state space model and a new cost functional and show that its solution is a fuzzy controller This leads to a new framework for fuzzy modeling and control that combines the advantages of the fuzzyworld such as linguistic interpretability and of classical

optimal control theory such as guaranteed stability and robustness
