Fuzzy Geometric Programming:

Fuzzy Geometric Programming Bing-Yuan Cao, 2013-11-27 Fuzzy geometric programming was originated by the author in the Proceeding of the second IFSA conferences 1987 Tokyo 14 years ago Later the paper was invited for formal publication in the International Journal of Fuzzy Sets and Systems From then on more and more papers have been written by scholars all over the world who have been interested in its research So this programming method has been acknowledged by experts and has gradually formed a new branch of fuzzy mathematics Inspired by Zadeh's fuzzy sets theory fuzzy geometric programming emerges from the combination of fuzzy sets theory with geometric programming where models are built in the fuzzy posynomial and the reverse geometric programming The present book is intended to discuss fuzziness of objective function and constraint conditions a variety of fuzzy numbers in coefficients and variables and problems about multi objective fuzzy geometric programming It establishes and rounds out an entire theory system showing that there exist conditions of fuzzy optimal or most satisfactory solutions in fuzzy geometric programming and it develops some effective algorithms In order to introduce this new branch the book aims at the exposition of three points encompassing ideas and conception theory and methods and diffusion and application It lays more emphasis on the second point than the first one and less on the third Besides it introduces some knowledge of classical geometric programming and of fuzzy sets theory and application examples of fuzzy geometric programming in electric power systems as well *Fuzzy Geometric Programming Techniques and Applications* Sahidul Islam, Wasim Akram Mandal, 2019-01-31 This book develops the concepts of various unique optimization techniques in the crisp and fuzzy environment It provides an extensive overview of geometric programming methods within a unifying framework and presents an in depth discussion of the modified geometric programming problem fuzzy geometric programming as well as new insights into goal geometric programming With numerous examples and exercises together with detailed solutions for several problems the book also addresses fuzzy multi objective geometric programming techniques Geometric programming which falls into the general class of signomial problems has applications across disciplines from engineering to economics and is extremely useful in applications of a variety of optimization problems Organized into thirteen chapters this book is a valuable resource for graduate and advanced undergraduate students and researchers in applied mathematics and engineering **Fuzzy Relational Mathematical Programming** Bing-Yuan Cao, Ji-Hui Yang, Xue-Gang Zhou, Zeinab Kheiri, Faezeh Zahmatkesh, Xiao-Peng Yang, 2019-11-22 This book summarizes years of research in the field of fuzzy relational programming with a special emphasis on geometric models It discusses the state of the art in fuzzy relational geometric problems together with key open issues that must be resolved to achieve a more efficient application of this method Though chiefly based on research conducted by the authors who were the first to introduce fuzzy geometric problems it also covers important findings obtained in the field of linear and non linear programming Thanks to its balance of basic and advanced concepts and its wealth of practical examples the book offers a valuable guide for both

newcomers and experienced researcher in the fields of soft computing and mathematical optimization

A Single-valued Pentagonal Neutrosophic Geometric Programming Approach to Optimize Decision Maker's Satisfaction Level Satyabrata Nath, Purnendu Das, Pradip Debnath, 2023-01-01 Achieving the desired level of satisfaction for a decision maker in any decision making scenario is considered a challenging endeavor because minor modifications in the process might lead to incorrect findings and inaccurate decisions In order to maximize the decision maker's satisfaction this paper proposes a Single valued Neutrosophic Geometric Programming model based on pentagonal fuzzy numbers The decision maker is typically assumed to be certain of the parameters but in reality this is not the case hence the parameters are presented as neutrosophic fuzzy values The decision maker with this strategy is able to achieve varying levels of satisfaction

and dissatisfaction for each constraint and even complete satisfaction for certain constraints Here the decision maker aims to achieve the maximum level of satisfaction while maintaining the level of hesitation and minimizing dissatisfaction in order to retain an optimum solution Furthermore transforming the objective function into a constraint adds one more layer to the N dimensional multi parametrizes and The advantages of this multi parametrized proposed method over the existing ones are proven using numerical examples **Mathematical Reviews** ,2004 *Progress of Mathematics* ,1998
