Questions

Textbook Notes

D. Measurement - Looking for some certain things.
Example: Student who is weighed on scale.

Monitor in Psychology Magazine

I titled this section "Questions" but I often write other misc things that I want to remember here. I think of it as a multi-purpose column

3. Possible limits of "free choice"
B. Science makes systematic observations
• Scientists' systematic observations include:
a. precise definitions of phenomena being observed
b. reliable + valid measuring tools that yield useful + interpretable data.
c. generally accepted methodological
d. System of logic for drawing conclusions and fitting those into general theories.

- 1. Reliability: consistency of a measure.
- 2. Validity: does a measure truly assess quality that it's claimed to measure? Truthfulness of a measure.

3. Accuracy: Agreement with a known standard (process of calibration).
Focus remains with these two because the 3rd will often be disputed.

E. Testable Questions - Can hypothesis/claim be falsified at least in principle (notion of falsifiability) by Carl

I didn't hear the last name of someone the professor mentioned during lecture so I left a blank space. If I think the name is important I can fill it in later if its mentioned or I know what to ask the prof later on.

C. Science Produces Public Knowledge.
• An objective observation is someone who is completely objective (like Peirce thought). It just means something that can be verified by more than 1 observer.

F. Public Reporting: Many places they can publish.
- Peer Reviewed journals (most esteemed).
- Sci are proud and want to get it out
- Way you establish reputation
- We have to be aware of knowledge in order to advance and build on science.
- Allows others to make their own judgment even if original peer review.
- Allows sci to learn about findings and evaluate quality of

Psychological Science (Peer Reviewed Journal)

S-13

When I take a break from reading, I like to leave a note to remind me where I left off.

- Done through replication where someone redoes another's study and gets same results.
• Replication can only be done if they know precisely what was done. This is done by rules that are found in Publication Manual of APA.

I highlight key terms that I think might be important

• Introspection: a form of precise self-report.
- The problem w/ introspect is that its subjective and not verifiable.
- John B. Watson concluded that something can only be "scientific" if its directly observable and can be verified.
• Watson felt behavior was the key for this. So he became the founder of behaviorism.
Now we observe behavior instead of introspect.

D. Science Produces Data-Based Conclusions -
• Scientists are data-driven
- Conclusions about behavior need to be supported by some evidence.

I failed to do this in my template, but its always a good idea to include your name and a way to contact you, so if your notes get lost they can be returned to you
