Invariant Means and Finite Representation Theory of C^ -Algebras* Nathaniel Patrick Brown, 2006. Various subsets of the tracial state space of a unital C algebra are studied. The largest of these subsets has a natural interpretation as the space of invariant means. II_1 factor representations of a class of C algebras considered by Sorin Popa are also studied. These algebras are shown to have an unexpected variety of II_1 factor representations. In addition to developing some general theory, we also show that these ideas are related to numerous other problems in operator algebras.
