Formal Methods for Open Object-Based Distributed Systems V Bart Jacobs,Arend Rensink,2013-04-17 Formal Methods for Open Object Based Distributed Systems V brings together research in three important and related fields Formal methods Distributed systems Object based technology Such a convergence is representative of recent advances in the field of distributed systems and provides links between several scientific and technological communities The wide scope of topics covered in this volume range in subject from UML to object based languages and calculi and security and in approach from specification to case studies and verification This volume comprises the proceedings of the Fifth International Conference on Formal Methods for Open Object Based Distributed Systems FMOODS 2002 which was sponsored by the International Federation for Information Processing IFIP and held in Enschede The Netherlands in March 2002

Testing of Communicating Systems Bernd Baumgarten,Heinz-Jürgen Burkhardt,Alfred Giessler,2013-06-05 This volume contains the proceedings of the IFIP WG 6.1 International Workshop on Testing of Communicating Systems IWTCs 96 held in Darmstadt Germany on September 9 through 11 1996 continuing the IFIP WG 6.1 series of International Workshops on Protocol Test Systems IWPTS In this series of working conferences held annually since 1988 many valuable contributions have been presented with an emphasis both on the OSI conformance testing methodology and framework as well as the standardization effort on formal methods in

conformance testing While there are still open issues and divergencies between theory and practice in these fields the scope of the series started expanding to related fields of growing practical relevance for example to testing with regard to the B-ISDN protocol reference model in particular ATM the ODP reference model and the Internet protocol suite as well as to interoperability testing and performance testing To reflect the extended scope the program committee agreed on a new name for this series of working conferences to be applied the first time to the 1996 conference However in order to emphasize the tradition of IWPTS the numbering of this series was continued such that IWTC96 is counted as the 9th International Workshop on Testing of Communicating Systems As in the years before the workshop aims at bringing together researchers and practitioners furthering the exchange of views and correlating the work of both sides

Distributed Systems Albert Fleischmann, 2012-12-06 The purpose of this book is to make the reader familiar with software engineering for distributed systems Software engineering is a valuable discipline in the development of software The reader has surely heard of software systems completed months or years later than scheduled with huge cost overruns systems which on completion did not provide the performance promised and systems so catastrophic that they had to be abandoned without ever doing any useful work Software engineering is the discipline of creating and maintaining software when used in conjunction with more general methods for effective management its use does reduce the incidence of horrors mentioned above The book gives a good impression of software engineering particularly for distributed systems It emphasises the relationship between software life cycles methods tools and project management and how these constitute the framework of an open software engineering environment especially in the development of distributed software systems There is no closed software engineering environment which can encompass the full range of software missions just as no single flight plan airplane or pilot can perform all aviation missions There are some common activities in software engineering which must be addressed independent of the applied life cycle or methodology Different life cycles methods related tools and project management approaches should fit in such a software engineering framework
