

Chapter 5 – Elasticity and Its Applications

Do they depend both on the numbers of firms and on the price?

- What is elasticity? What kinds of factors can increase, decrease, or stabilize it?
- What is the price elasticity of demand? How is it related to the demand curve? How is it related to demand's steepness?
- What is the price elasticity of supply? How is it related to the supply curve?
- What are the income and cross-price elasticities of demand?

Key concepts

How supply and demand for good X are affected

How change in price of demand and supply will be affected and how

How price is being determined the opportunity cost of your time, as you're thinking of going your good to school

How price of demand curve that are shift will be affect elasticity if you have your good. How they have elasticity? How shift will your demand fall or right (increase/decrease)

Example

- Some price elasticity measures how much the variable responds to changes in another variable.
 - One type of elasticity measures how much demand for one variable will fall if another variable
- Definition:
 - Elasticity is a numerical measure of the responsiveness of Q^D or Q^S to a change in its determinants.

Price Elasticity of Demand

- Price elasticity of demand measures how much Q^D responds to a change in P .
- It measures the price sensitivity of buyers' demand.

$$\text{Price elasticity of demand} = \frac{\text{Percentage change in } Q^D}{\text{Percentage change in } P}$$

Along a demand curve, P and Q move in opposite directions, which usually makes price elasticity negative. We will look at this sign, and learn different methods to compute it.

Example

The responsiveness of the quantity demanded to a change in price

Calculating Percentage Change

Price falls from \$10 to \$9, quantity = 100 to 120

Price falls, so use “falls” in the numerator. Quantity rises, so use “rises” in the denominator.
